What is a robot?

What is a robot?

Sensors

Actuators

**Which robots do
we know?**

**Which robots do
actually exist?**

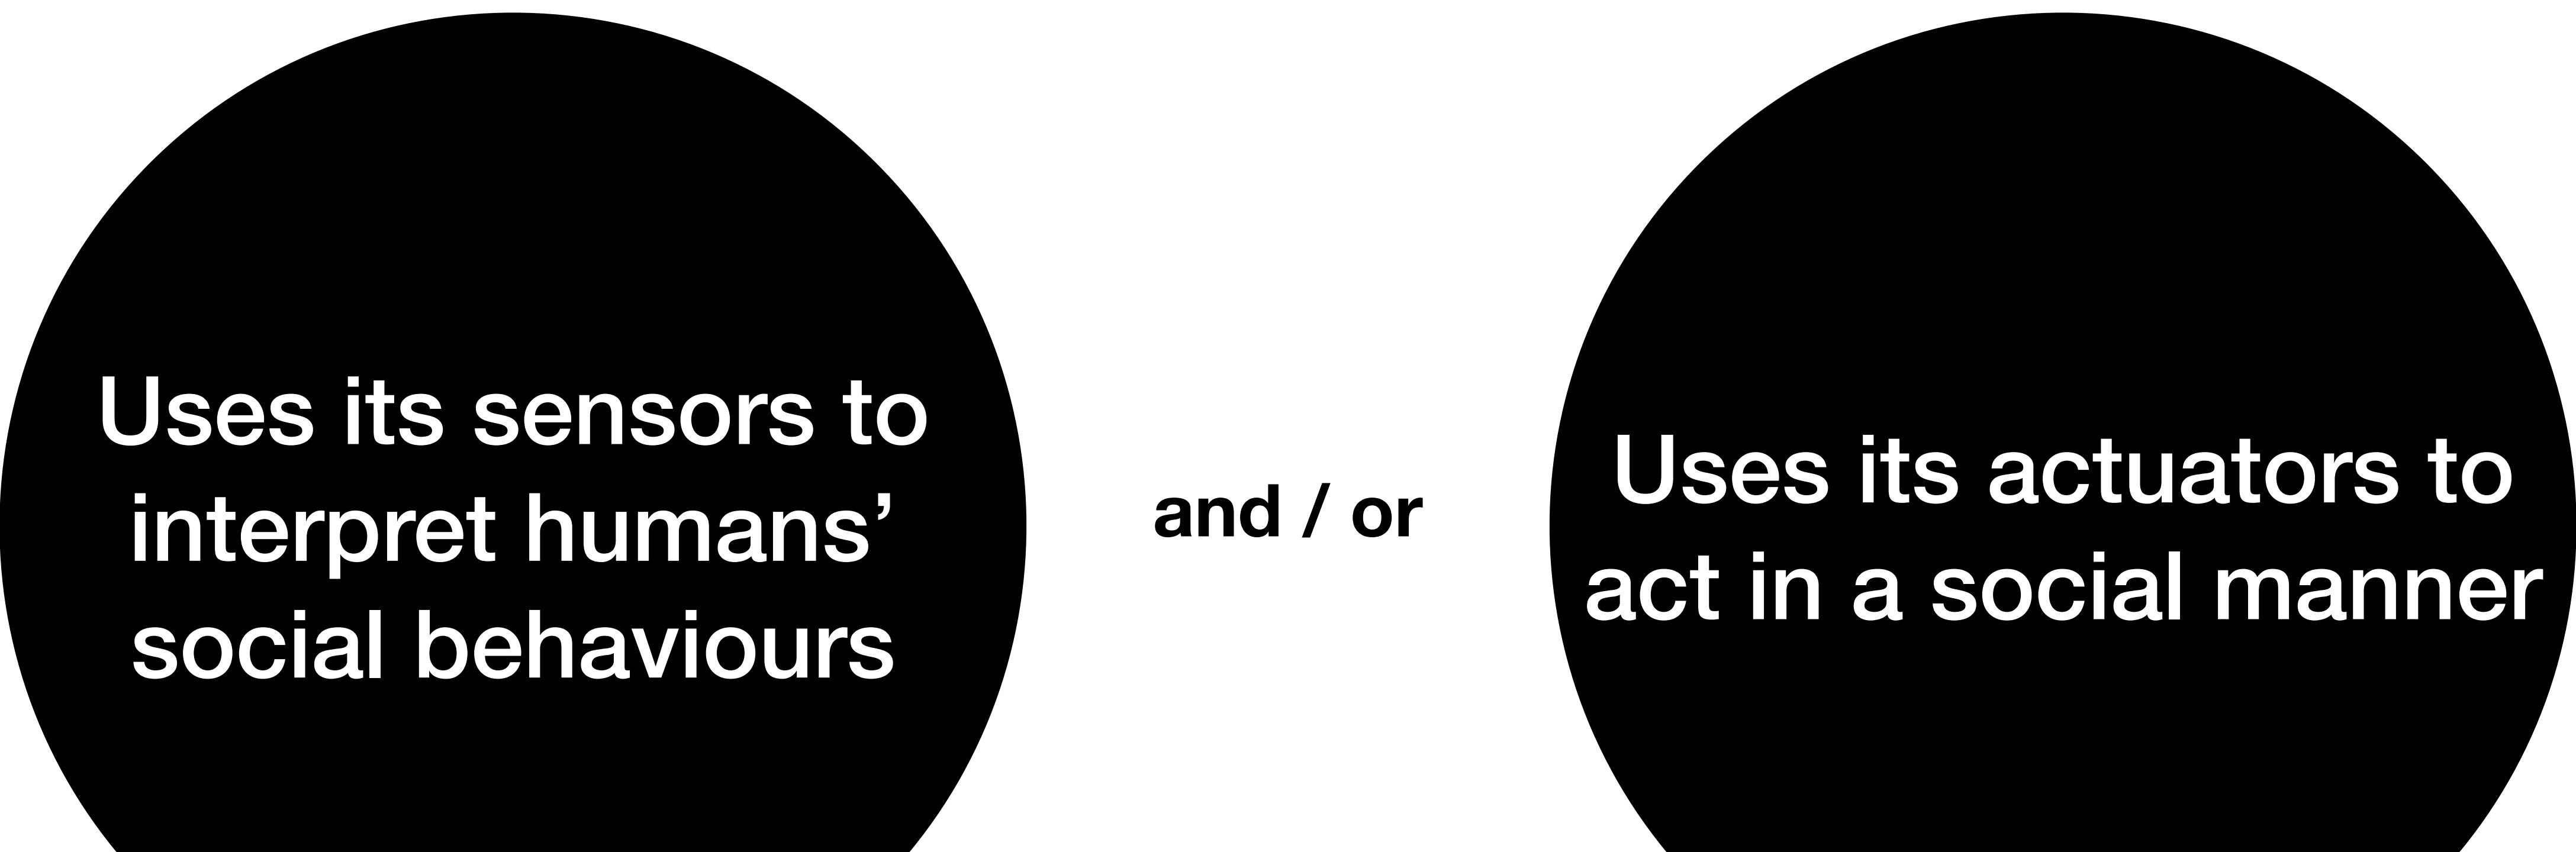

**And... what is a
social robot?**

And... what is a social robot?

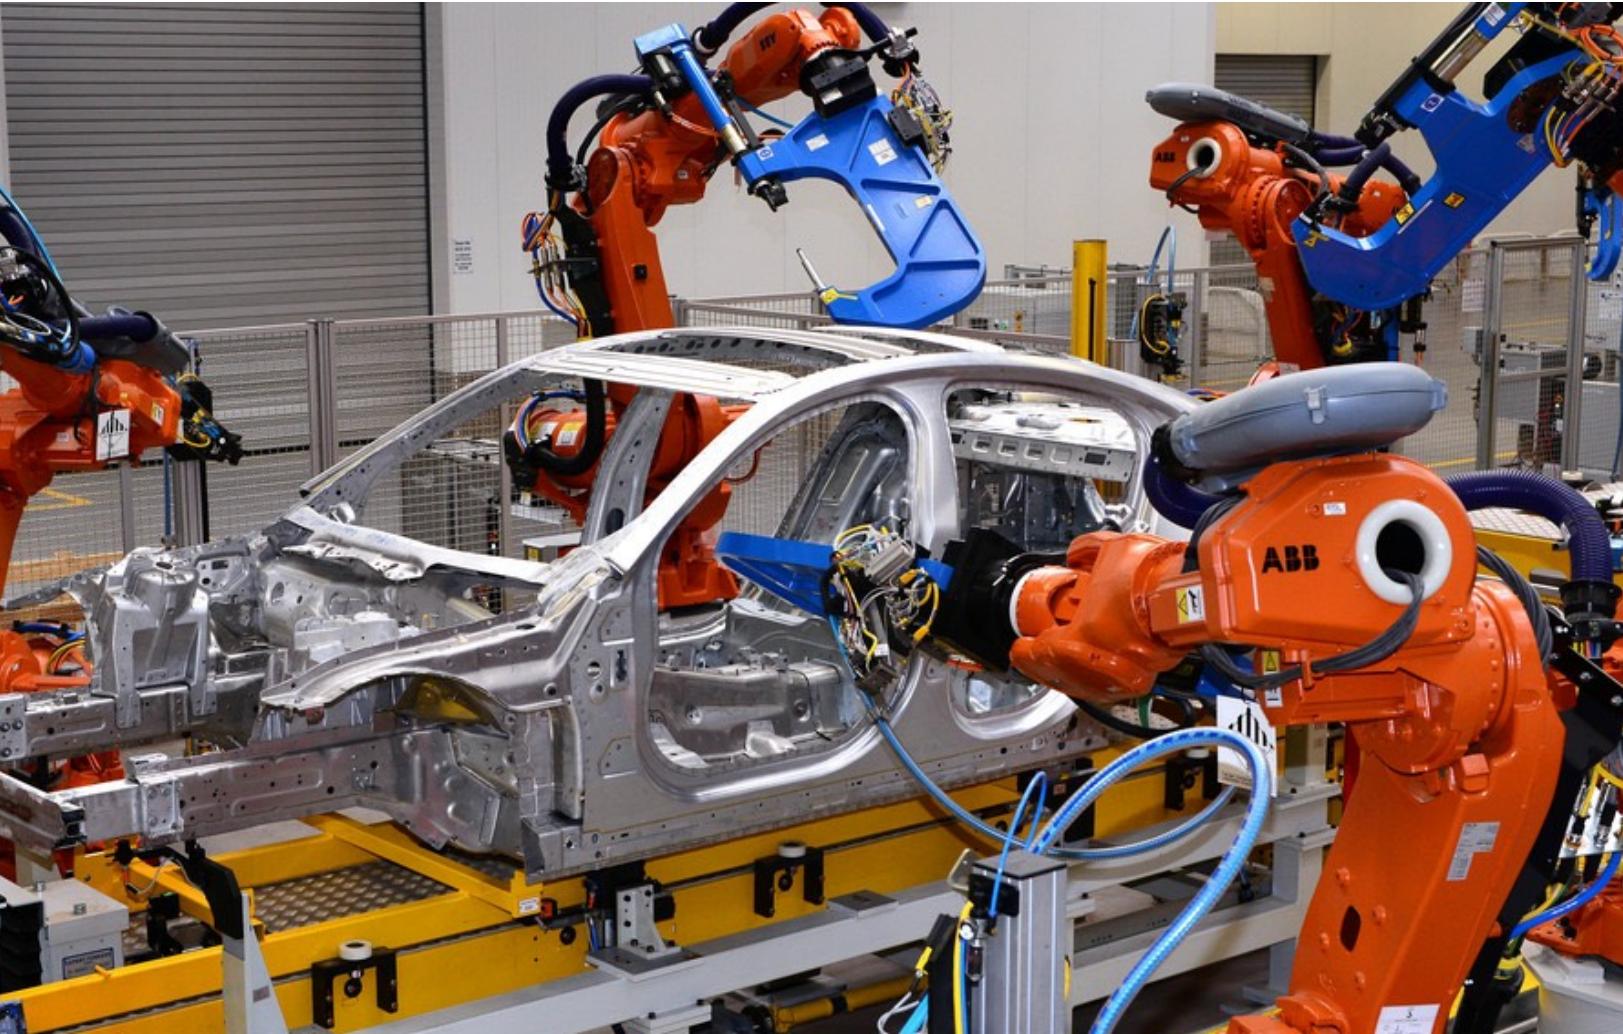

Uses its sensors to
interpret humans'
social behaviours

and / or

Uses its actuators to
act in a social manner

Are these robots social?

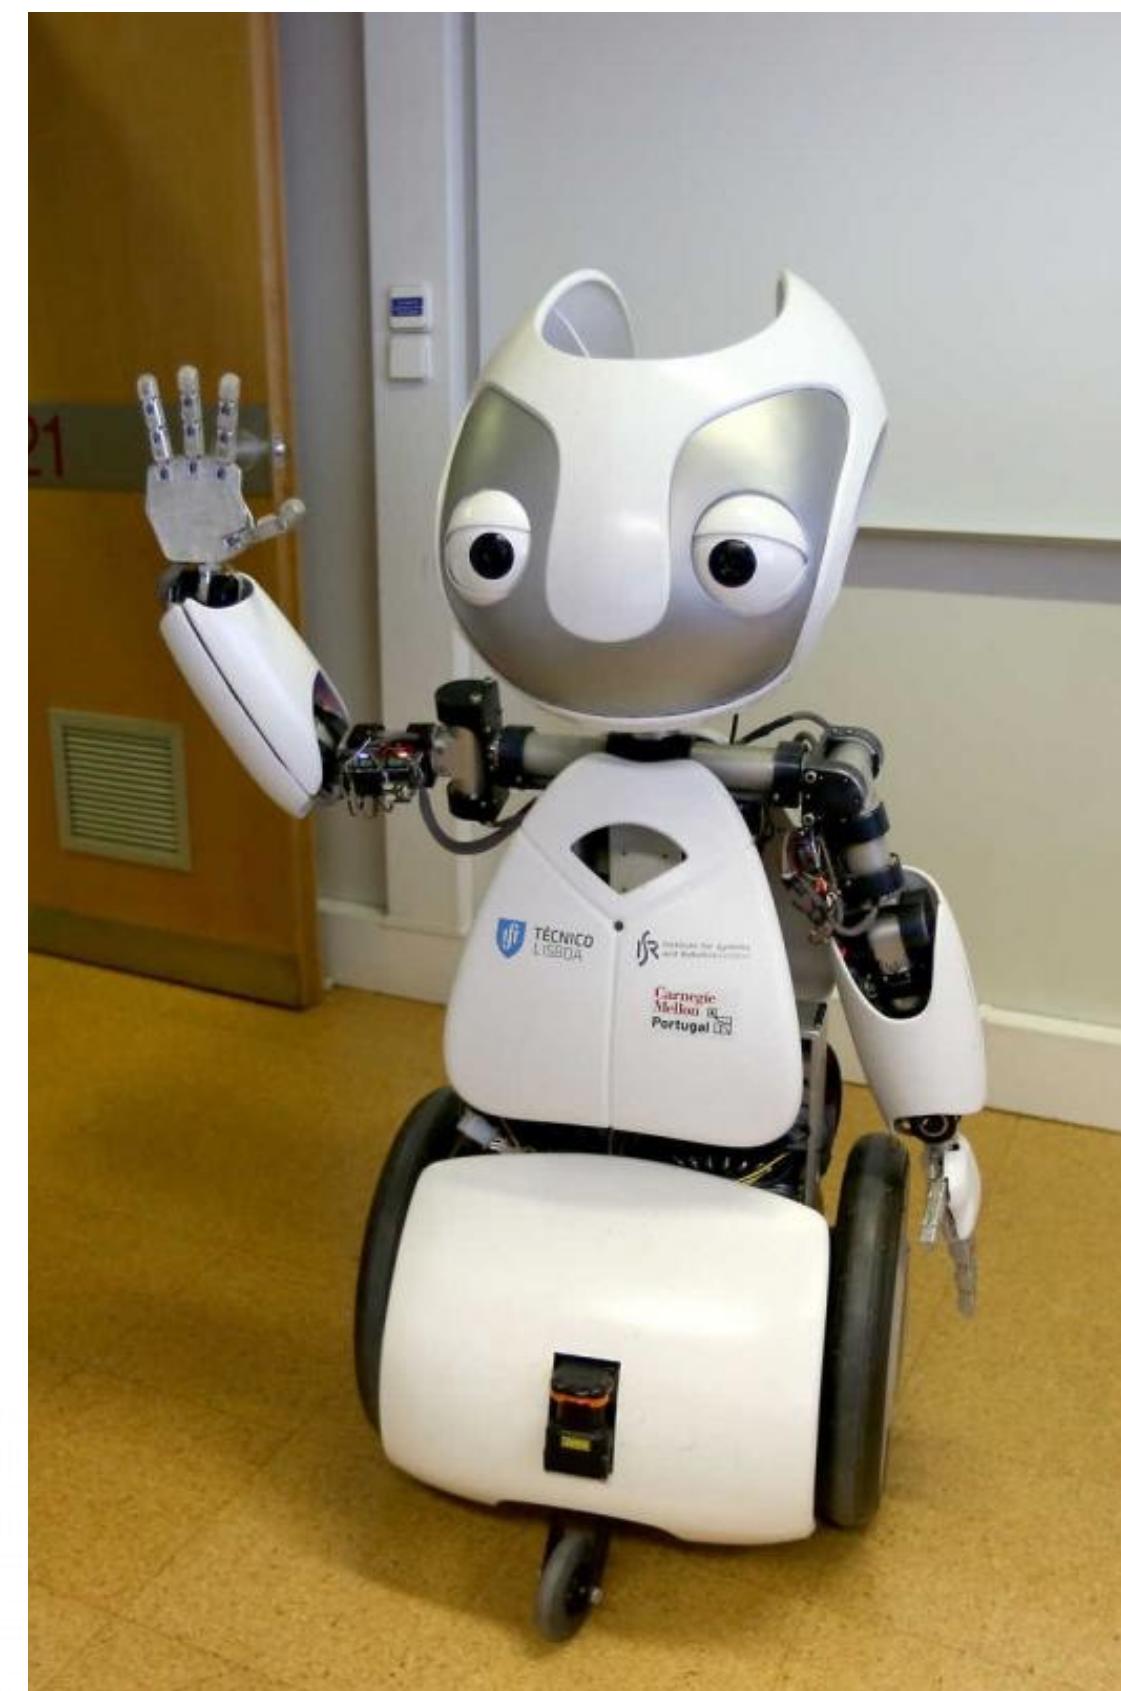

Are these robots social?

Probably not...

**Why do we need
social robots?**

Autonomy - Sheridan's Scale

Sheridan, 1978

1. Computer offers no assistance; human does it all
2. Computer offers a complete set of action alternatives
3. Computer narrows the selection down to a few choices
4. Computer suggests a single action
5. Computer executes that action if human approves
6. Computer allows the human limited time to veto before automatic execution
7. Computer executes automatically then necessarily informs the human
8. Computer informs human after automatic execution only if human asks
9. Computer informs human after automatic execution only if it decides to
10. Computer decides everything and acts autonomously, ignoring the human

Human-Robot Interaction

- Relational Role**
- Proximity**
- Robot Appearance**
- Autonomy and Intelligence**
- Social Capabilities**

Social Capabilities

Fong et al., 2003

According to Fong et al. a social robot can exhibit the following “human social” characteristics:

1. express and/or perceive emotions;
2. communicate with high level dialogue;
3. learn/recognise models of other agents;
4. establish/maintain social relationships;
5. use natural cues (gaze, gestures, etc.);
6. exhibit distinctive personality and character;
7. may learn/develop social competencies.

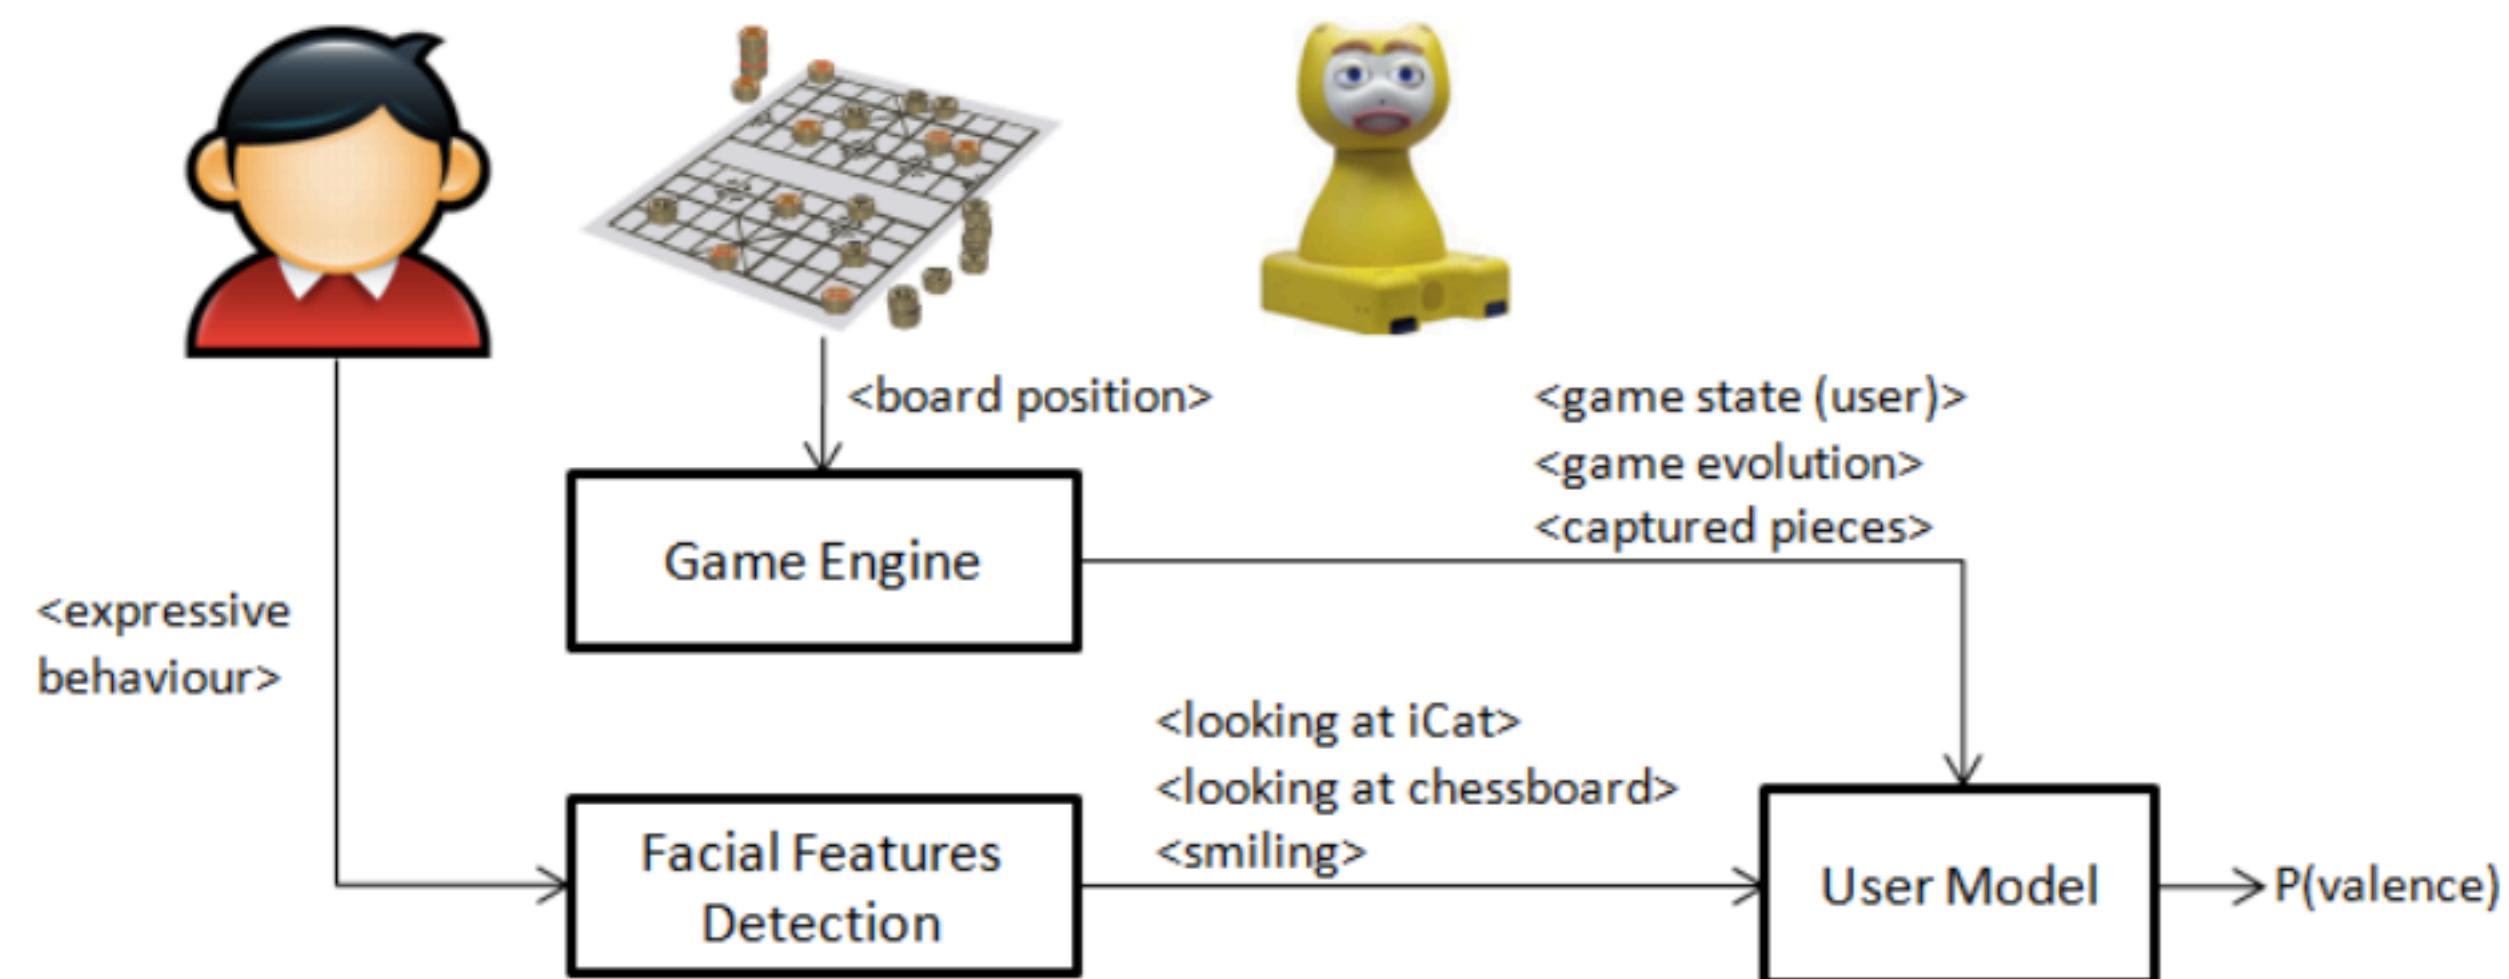

Social Capabilities

1. Express and/or perceive emotions

Leite et al., 2012

iCat the Affective Chess Player

“The results of the study suggest that children perceived the robot in both empathic versions as more engaging, helpful and also provided higher ratings in terms of self-validation.”

Social Capabilities

2. Communicate with high level dialogue

Williams & Scheutz, 2017

A reasoning component that produces human-preferred clarification requests that conform with the pragmatics of human-robot dialogue

“Our second experiment showed that the theoretical commitments of our robot architecture align with human preferences, and that the clarification requests generated by our full NLG pipeline may be comparable to human-generated clarification requests.”

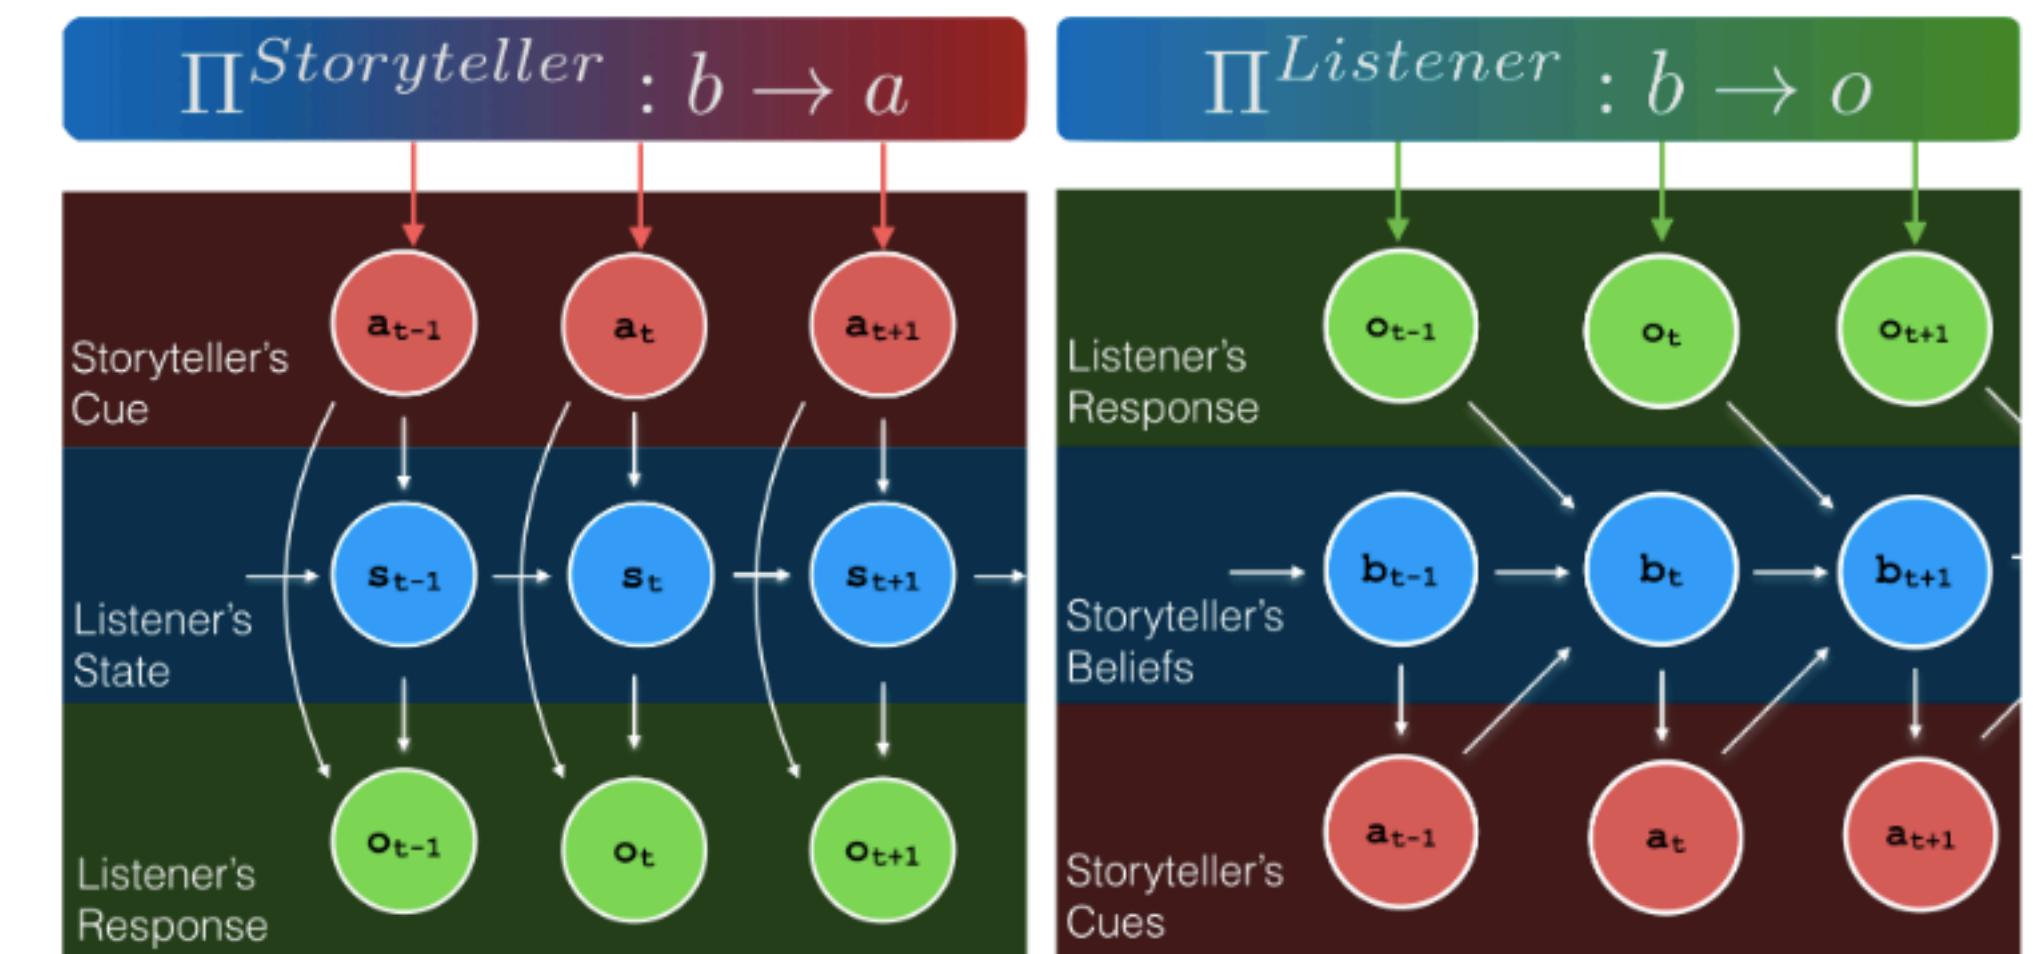

Social Capabilities

3. Learn/recognise models of other agents

Lee et al. 2019

Bayesian Theory of Mind approach to model dyadic storytelling interactions

“The role of storytellers is to influence and infer the attentive state of listeners using speaker cues, and we computationally model this as a POMDP planning problem. The role of listeners is to convey attentiveness by influencing perceptions through listener responses, which we computational model as a DBN with a myopic policy.”

(a) Intentional Inference Model

(b) Belief Manipulation Model

Social Capabilities

4. Establish/maintain social relationships

Leite et al., 2013

Int J Soc Robot (2013) 5:291–308
DOI 10.1007/s12369-013-0178-y

SURVEY

Guidelines for Future Design:

- Appearance and expectations
- Incremental Novel Behaviours
- Affective Interactions and Empathy
- Memory and Adaptation

Social Robots for Long-Term Interaction: A Survey

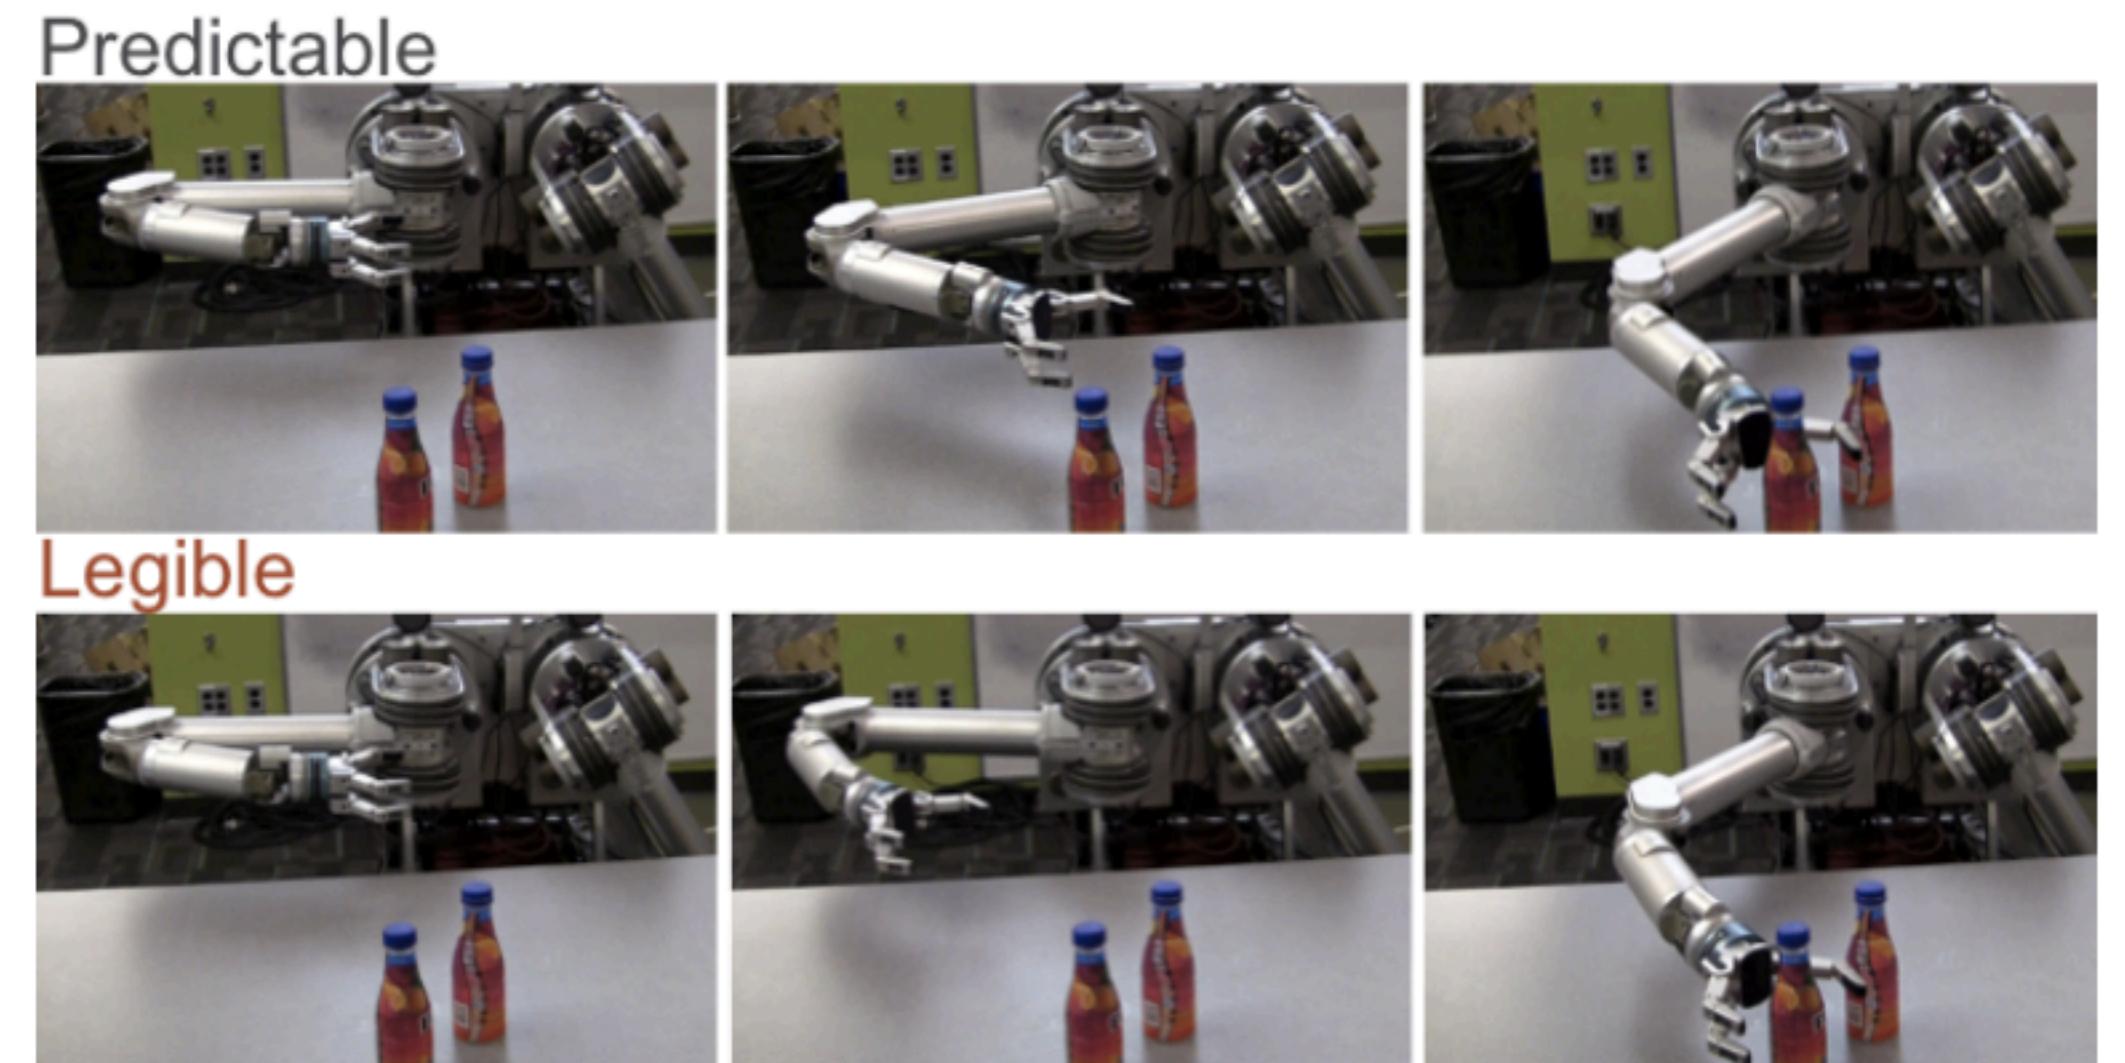

Social Capabilities

5. Use natural cues (gaze, gestures, etc.)

Dragan et al., 2013

A formalism to mathematically define and distinguish predictability and legibility of motion and models to generate predictable/legible motions based on optimizing cost.

“Legible motion is motion that enables an observer to quickly and confidently infer the correct goal G. Predictable motion is motion that matches what an observer would expect, given the goal G.”

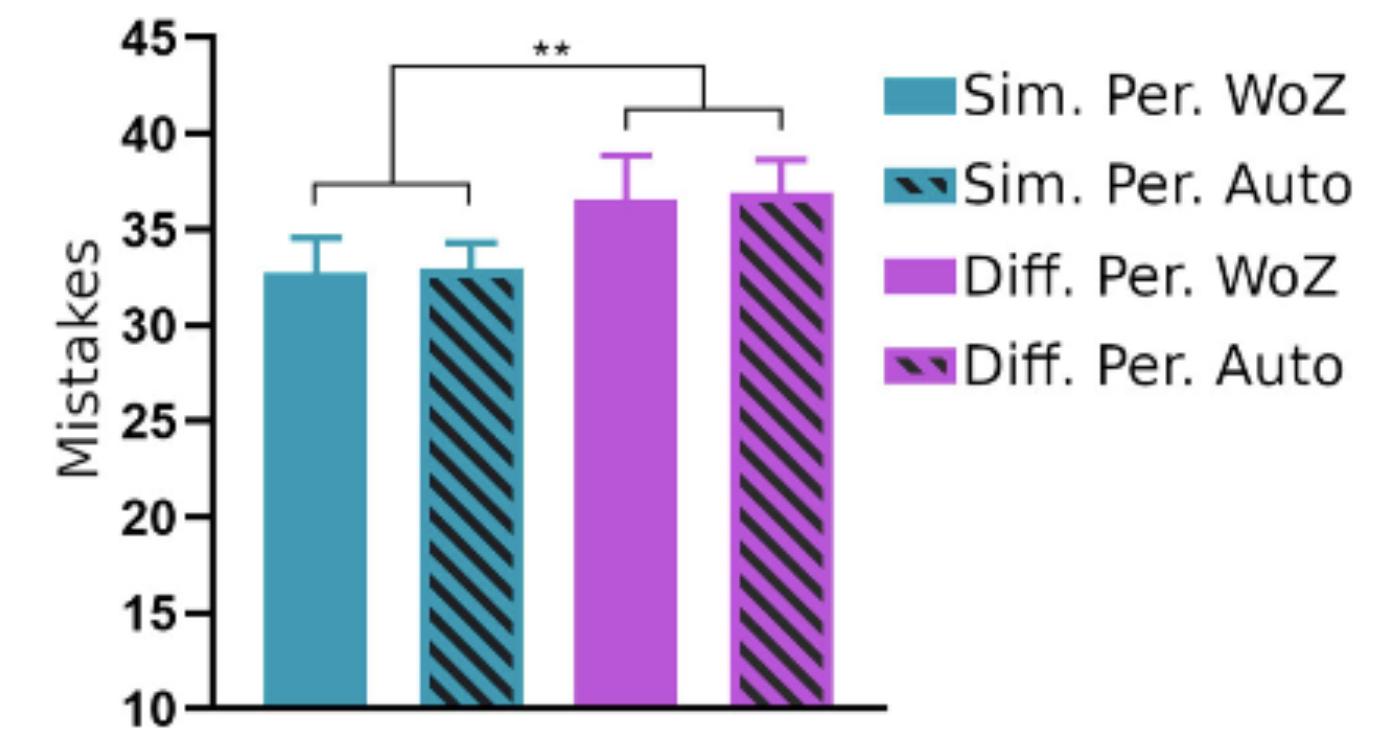

Social Capabilities

6. Exhibit distinctive personality and character

Andriella et al., 2020

Memory Game Assistive Scenario

“Our findings showed that participants were able to distinguish between robots’ personalities, and not between the level of autonomy of the robot (Wizard-of-Oz vs fully autonomous). Finally, we found that participants achieved better performance with a robot helper that had a similar personality to them, or a human helper that had a different personality.”

Social Capabilities

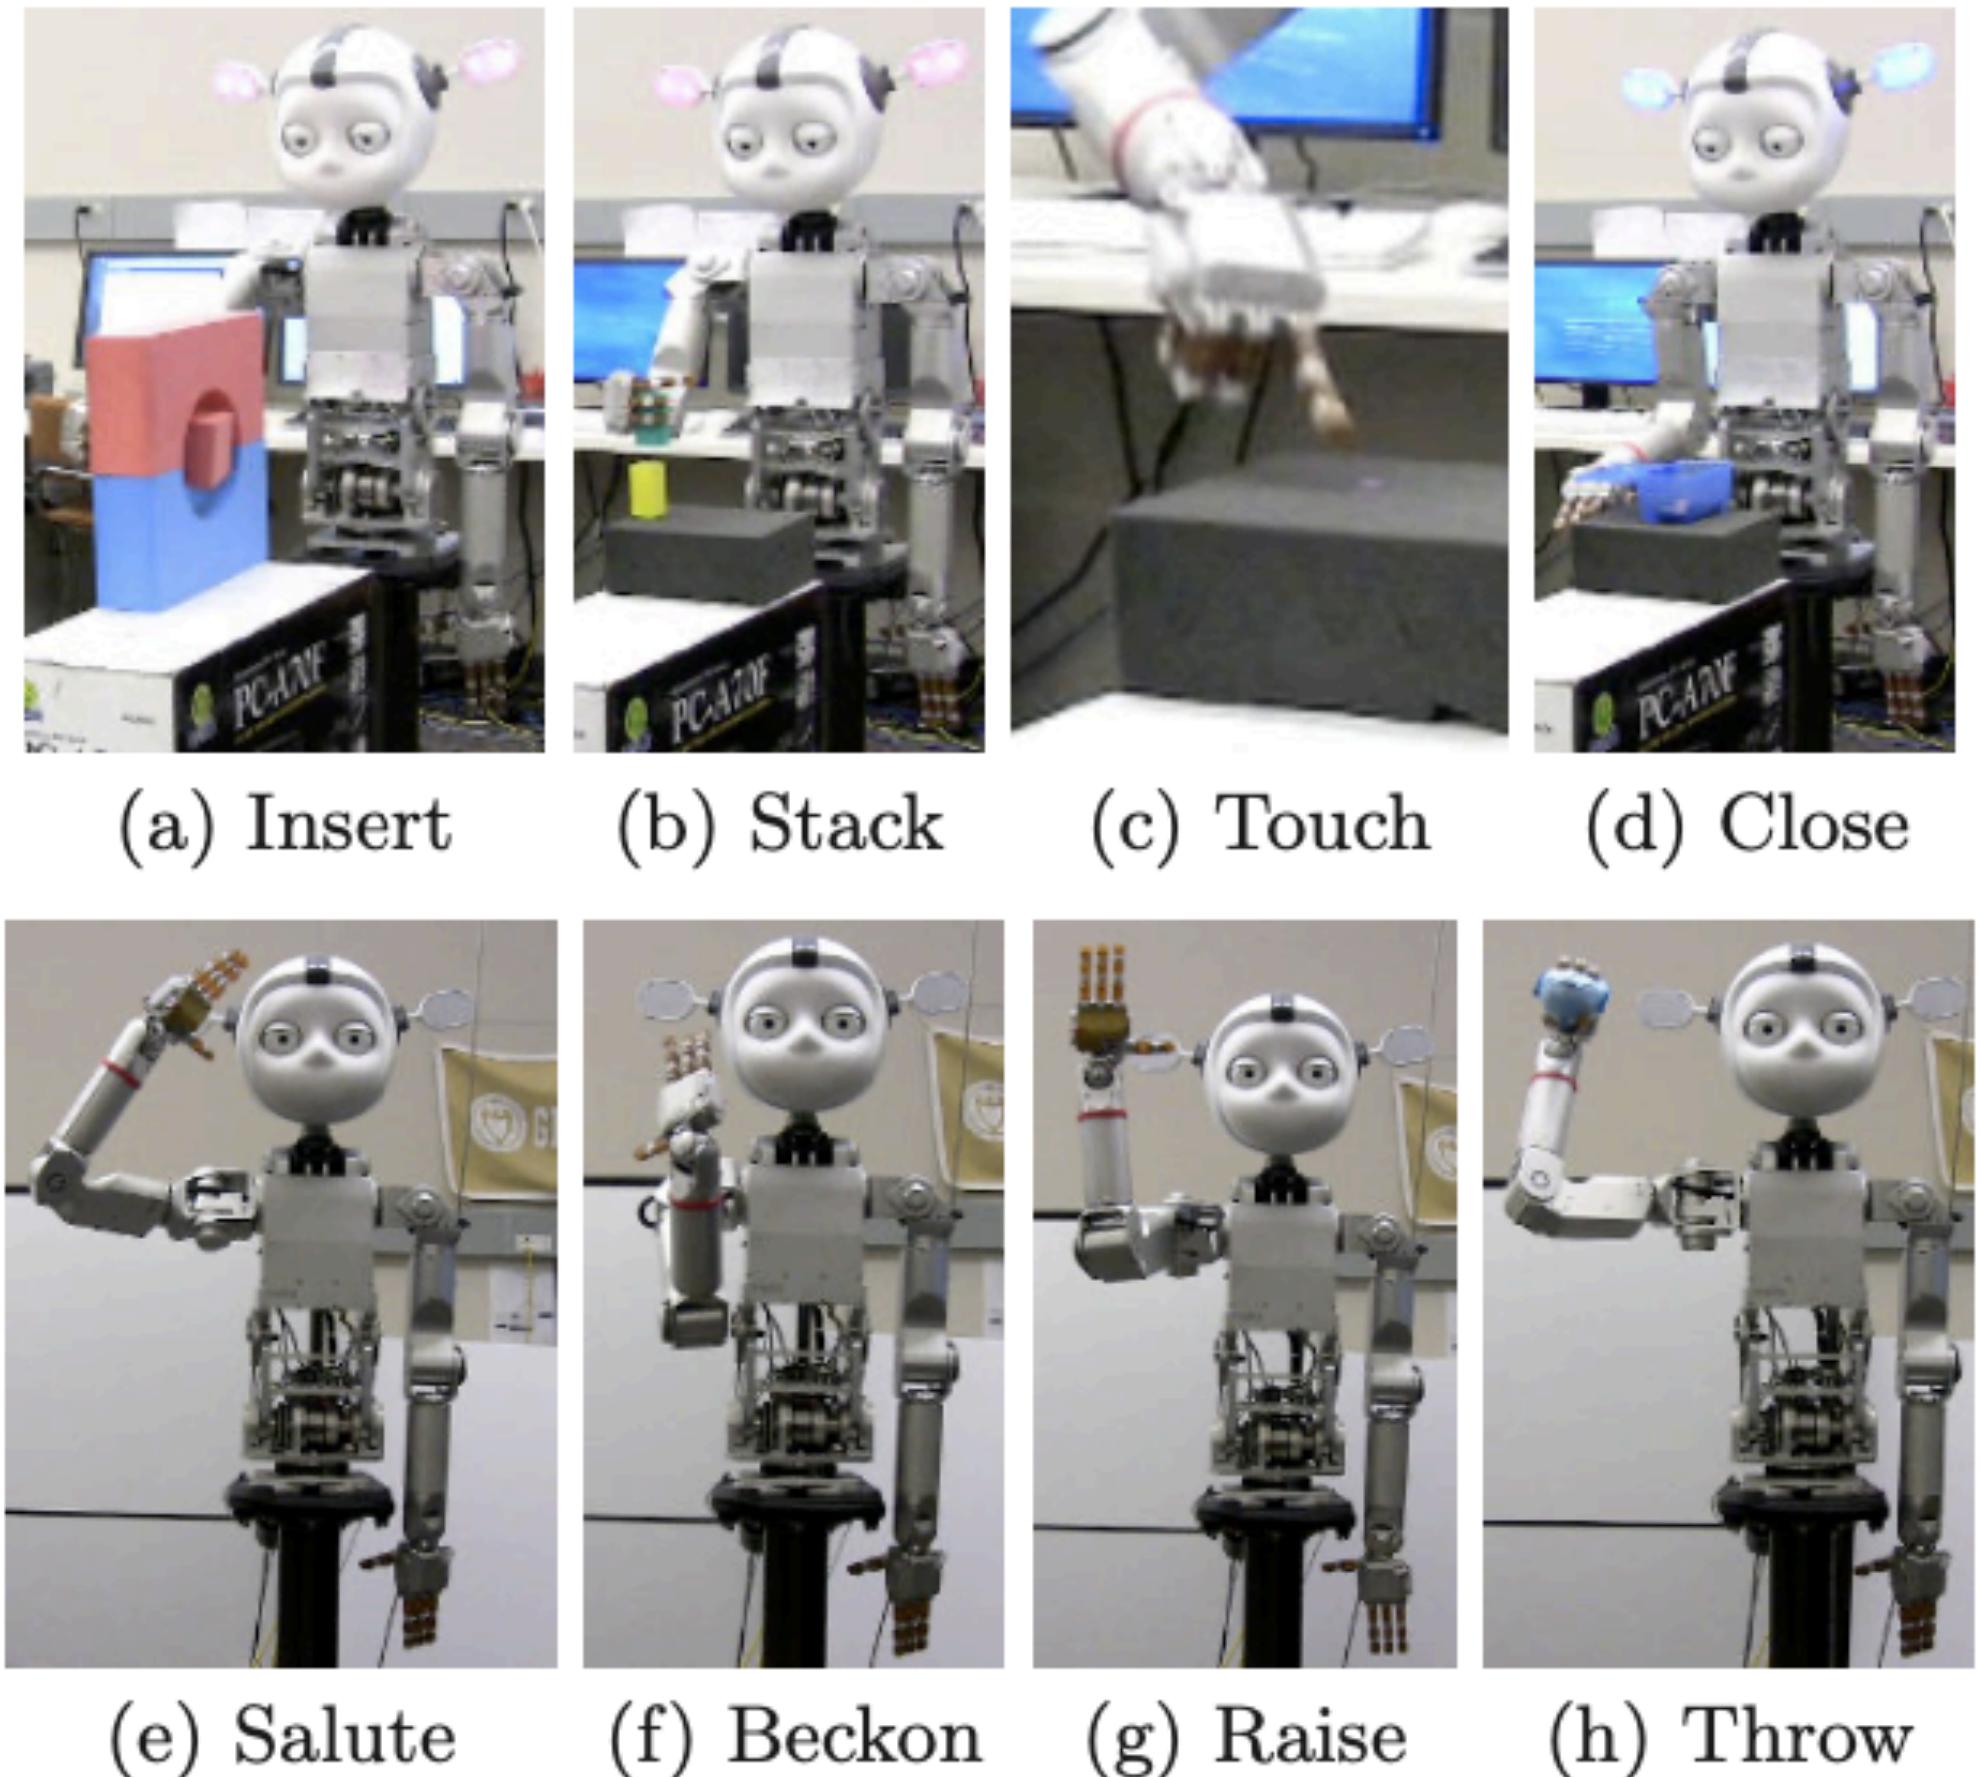

7. May learn/develop social competencies

Akgun et al., 2012

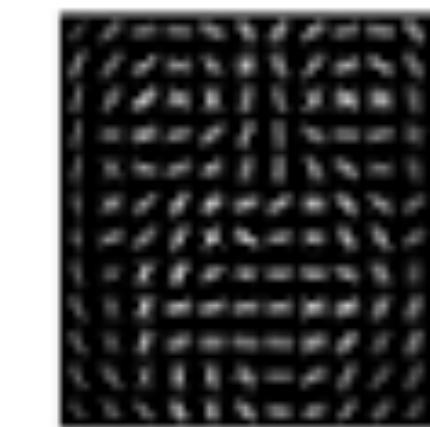

Learning by Demonstration

The paper explores three demonstration approaches. Human teachers can demonstrate skills to the robot in three different ways: trajectory demonstrations, keyframe demonstrations, and keyframe iterations.

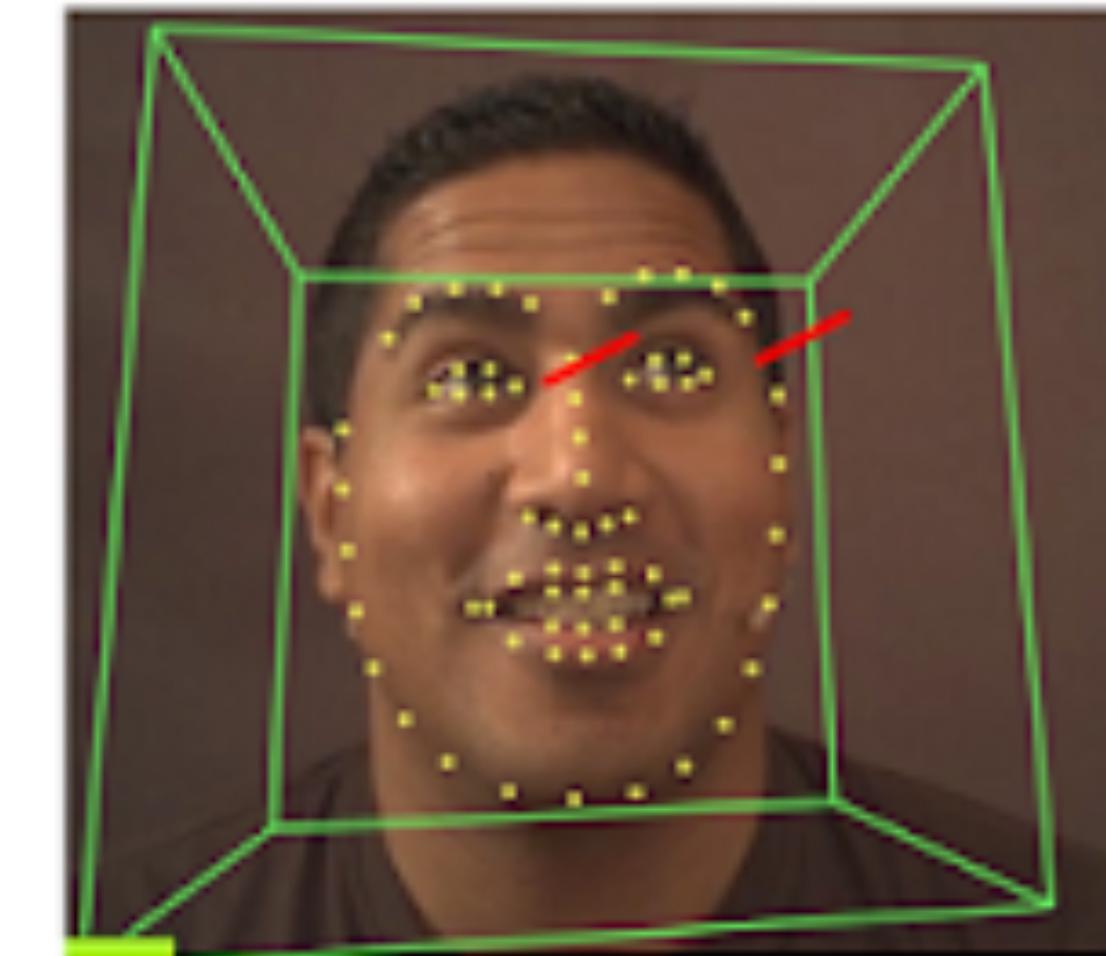

“Finally, based on these observations, we introduced a hybrid mode of interaction in which the user can chain together keyframe and trajectory segments.”

Lisbon, Portugal

ACM/IEEE Human-Robot Interaction 2016 Videos

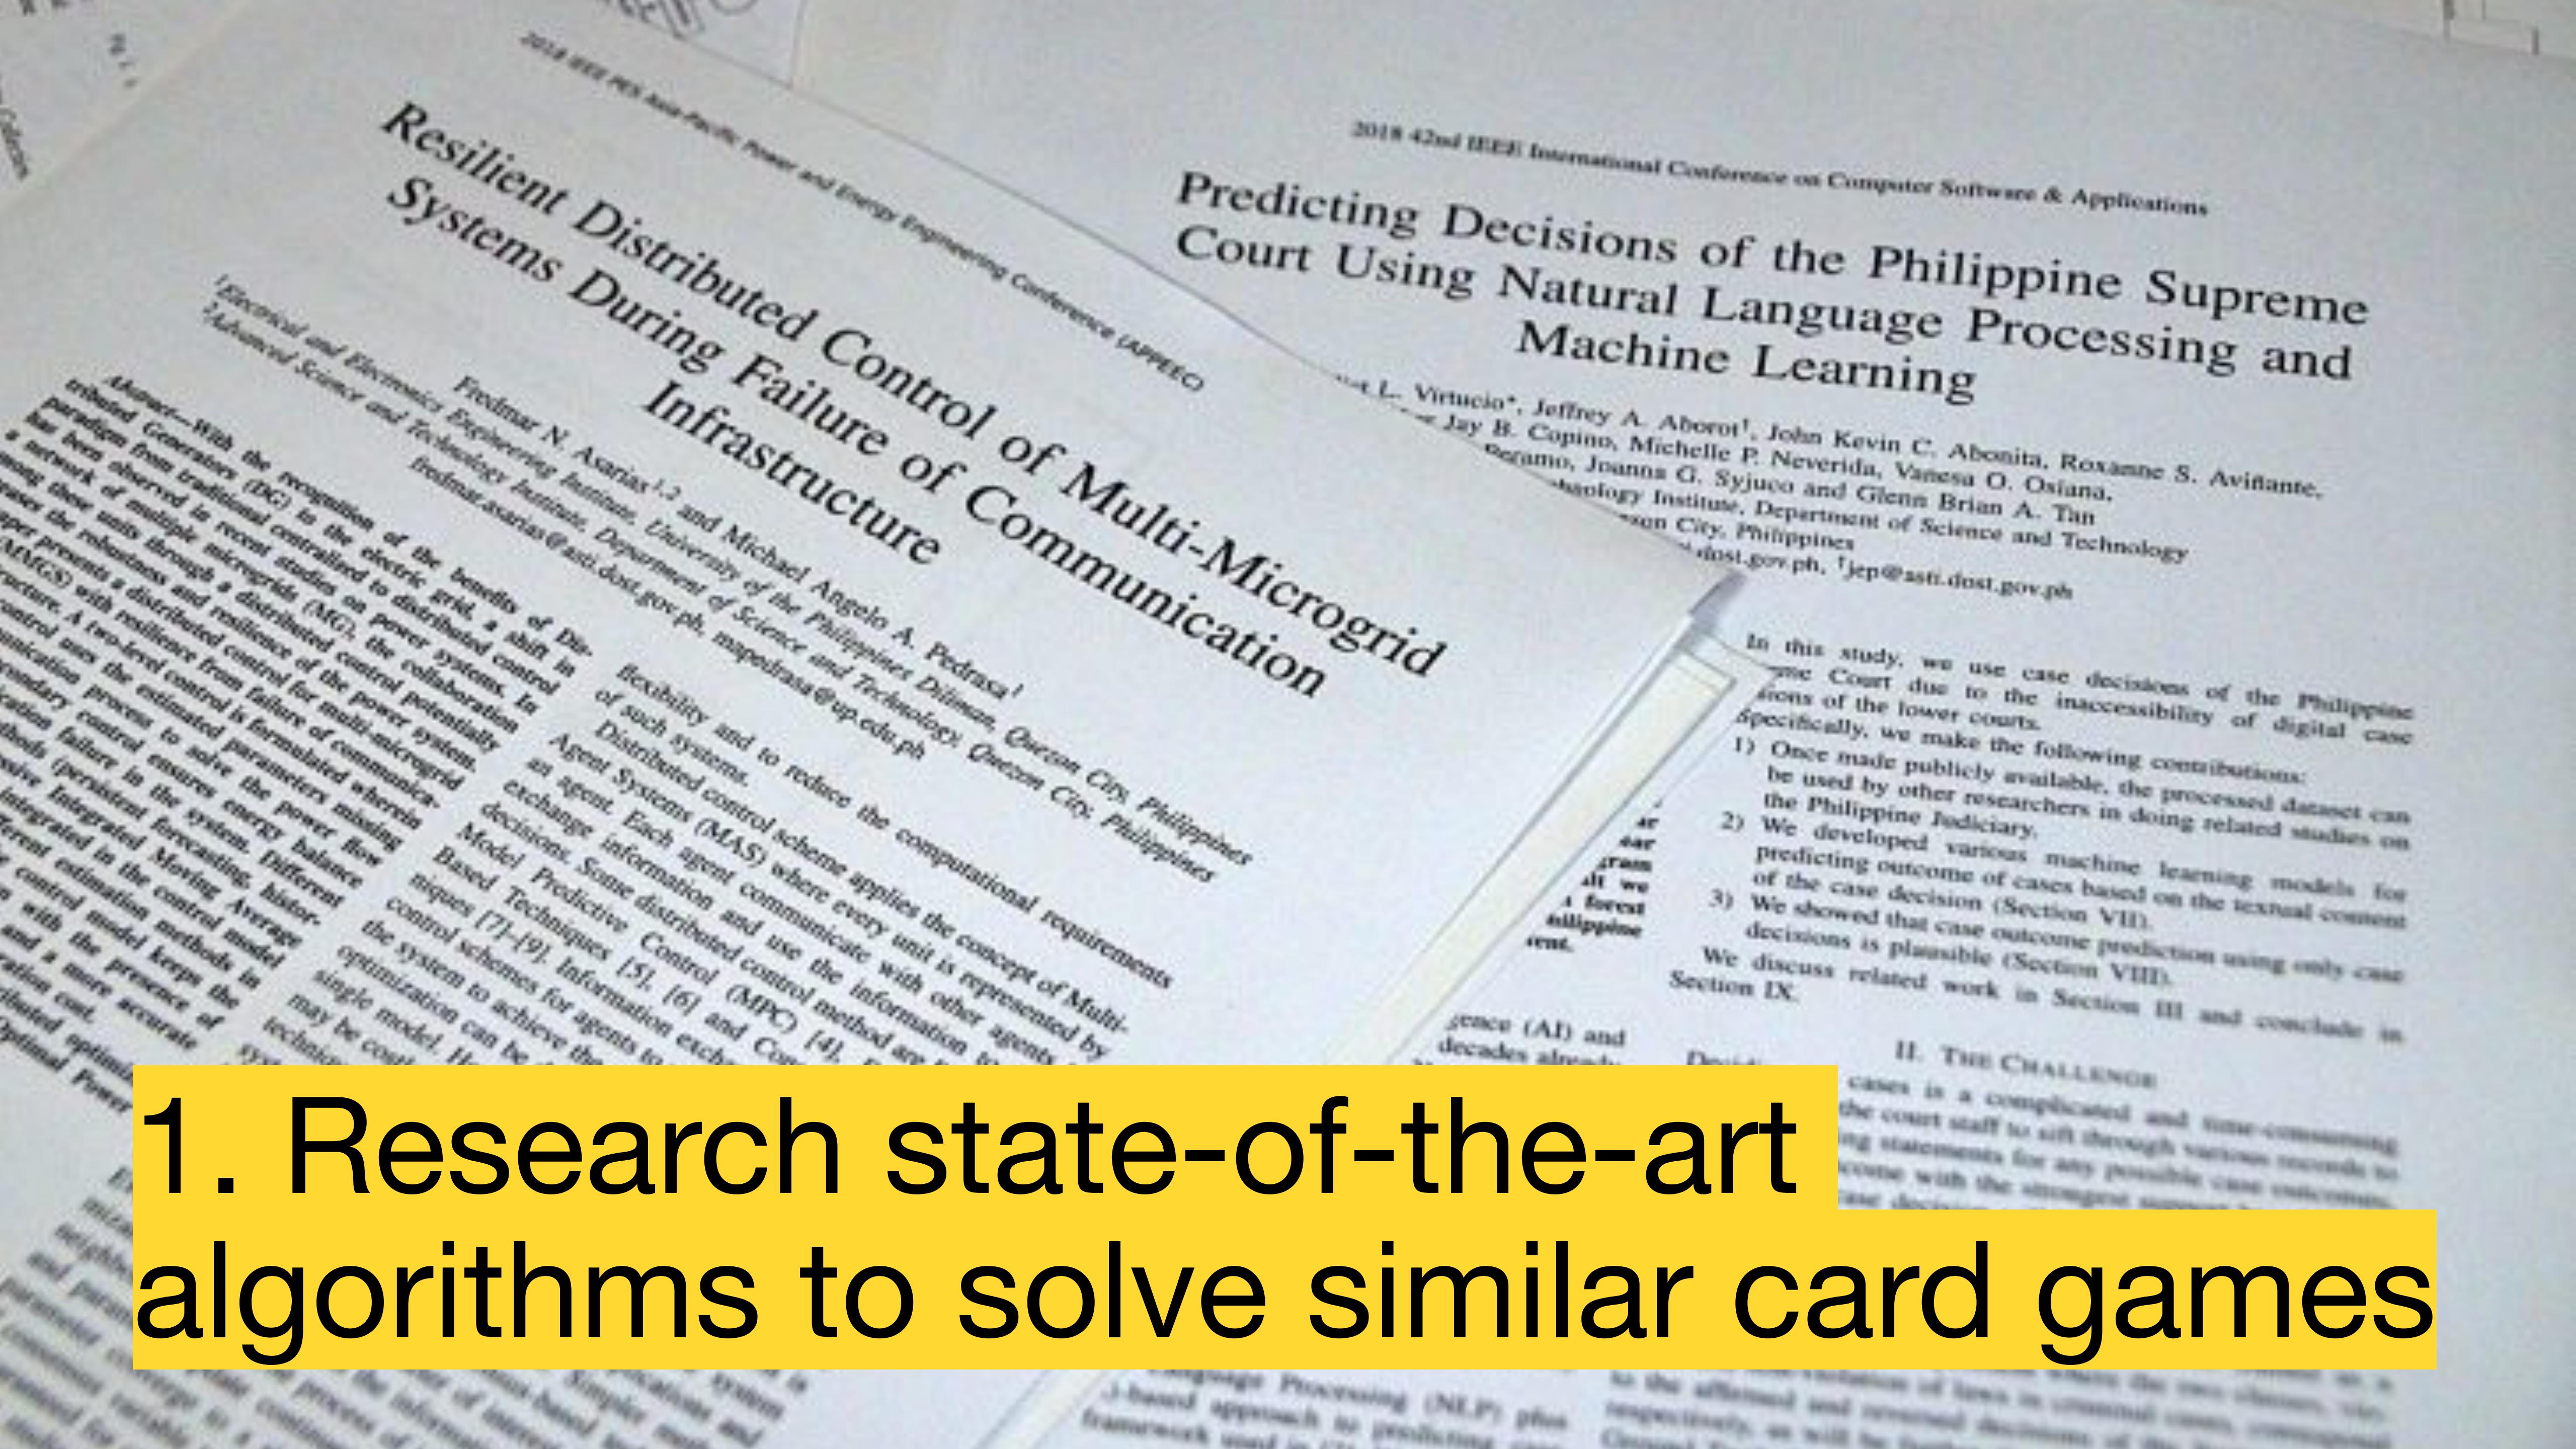

March 7-10, 2016

New Zealand

**How can we
create a robot that
plays “Sueca”?**

1. Research state-of-the-art algorithms to solve similar card games

2. Program the module that plays the card game (“bot”)

The screenshot shows a Sublime Text window displaying a C# file named `Program.cs`. The code is part of a project titled "the mind". The code implements a game manager with a focus on asynchronous operations and state management.

```
protected TheMindPublisher theMindPublisher;
protected int ID;
protected GameState _gameState;
protected List<GameState> eventsList;
protected static Mutex mut = new Mutex();
protected Random randomNums;
protected int MaxLevel;
protected int TopOfThePile;
protected float Pace;
protected List<int> cards;
protected List<int> cardsLeft;
protected Stopwatch stopwatch;
protected Stopwatch lastCardStopwatch;
protected int nextTimeToPlay;

public AutonomousAgent(string clientName, string character, int playerID)
{
    SetPublisher<IAutonomousAgentPublisher>();
    theMindPublisher = new TheMindPublisher(Publisher);
    ID = playerID;
    TopOfThePile = 0;
    Pace = 1000;
    _gameState = GameState.Waiting;
    eventsList = new List<GameState>();
    randomNums = new Random();
    stopwatch = new Stopwatch();
    lastCardStopwatch = new Stopwatch();
    nextTimeToPlay = -1;
    Thread thread = new Thread(MainLoop);
    thread.Start();
}

private void MainLoop()
{
    while(_gameState != GameState.StopMainLoop)
    {
        mut.WaitOne();
        if (_gameState == GameState.Waiting && eventsList.Count > 0)
        {
            _gameState = eventsList[0];
            eventsList.RemoveAt(0);
        }
        mut.ReleaseMutex();
        if (_gameState == GameState.NextLevel)
        {
            int randomWait = randomNums.Next(2000, 5000);
            Thread.Sleep(randomWait);
            theMindPublisher.ReadyForNextLevel(ID);
        }
    }
}
```

3. Observe the people's behaviours
while playing the game

4. Write the script of speeches and emotional behaviours for the robot to use during the game

5. Program the module that performs social behaviours

A blurred background image of a person working at a computer, showing a monitor displaying code.

```
protected void Mainloop()
{
    while(_gameState != GameState.StopMainloop)
    {
        _mut.WaitOne();
        if(_gameState == GameState.Waiting && eventsList.Count > 0)
        {
            _gameState = eventsList[0];
            eventsList.RemoveAt(0);
        }
        _mut.ReleaseMutex();
        if(_gameState == GameState.NextLevel)
        {
            int randomInt = randomNum.Next(2000, 5000);
            Thread.Sleep(randomInt);
            theMindPublisher.ReadyForNextLevel(ID);
        }
    }
}
```

Example 2: Exploring a research question

**Does the opinion
about a robotic
teammate change if
our team wins or
loses the game?**

- 1 person and 2 robots
form a team

- 1 person and 2 robots form a team
- “public-goods game”

- 1 person and 2 robots form a team
- “public-goods game”
- Used by economists to study cooperation among countries, for instance, in problems of climate change/agreements

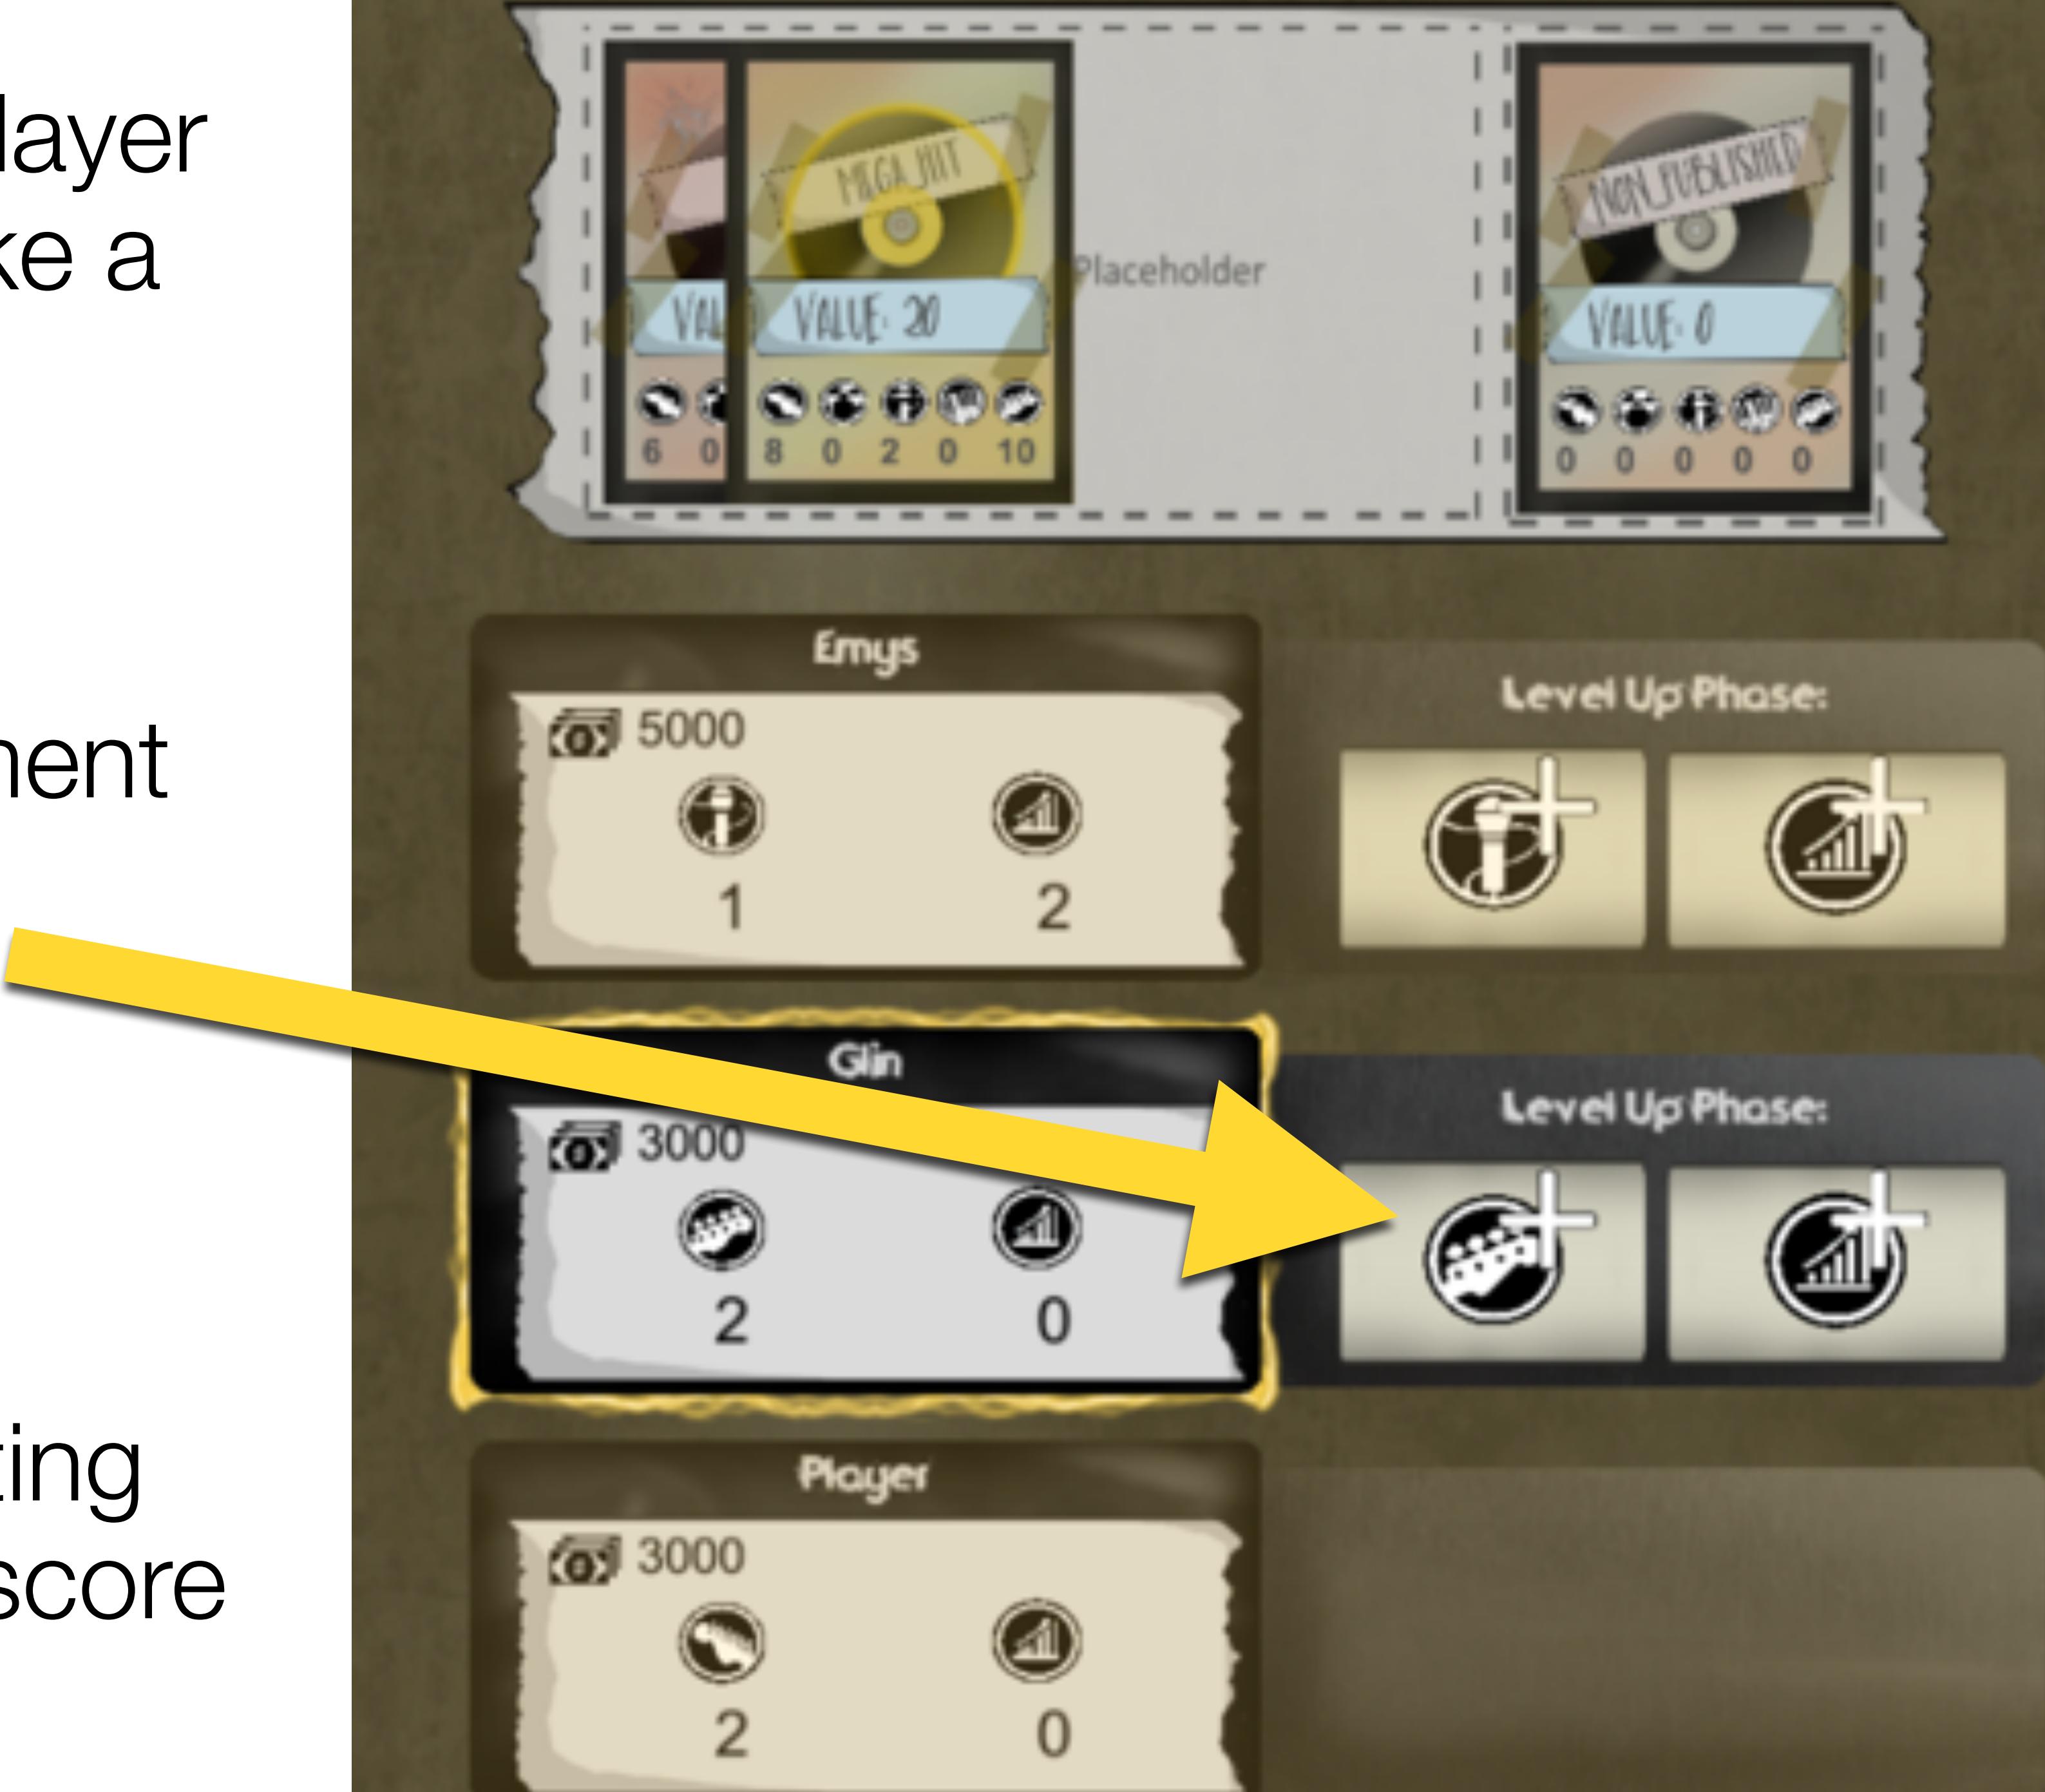

- 1 person and 2 robots form a team
- “public-goods game”
- Used by economists to study cooperation among countries, for instance, in problems of climate change/agreements
- We used a musical metaphor to mask the true game

In each round, each player has to individually make a choice:

A) invest in the instrument to favor the team

B) invest in the marketing to favor his individual score

In each round, each player has to individually make a choice:

A) invest in the instrument to favor the team

B) invest in the marketing to favor his individual score

A Public Goods Game For Exploring Human-Robot Collaboration

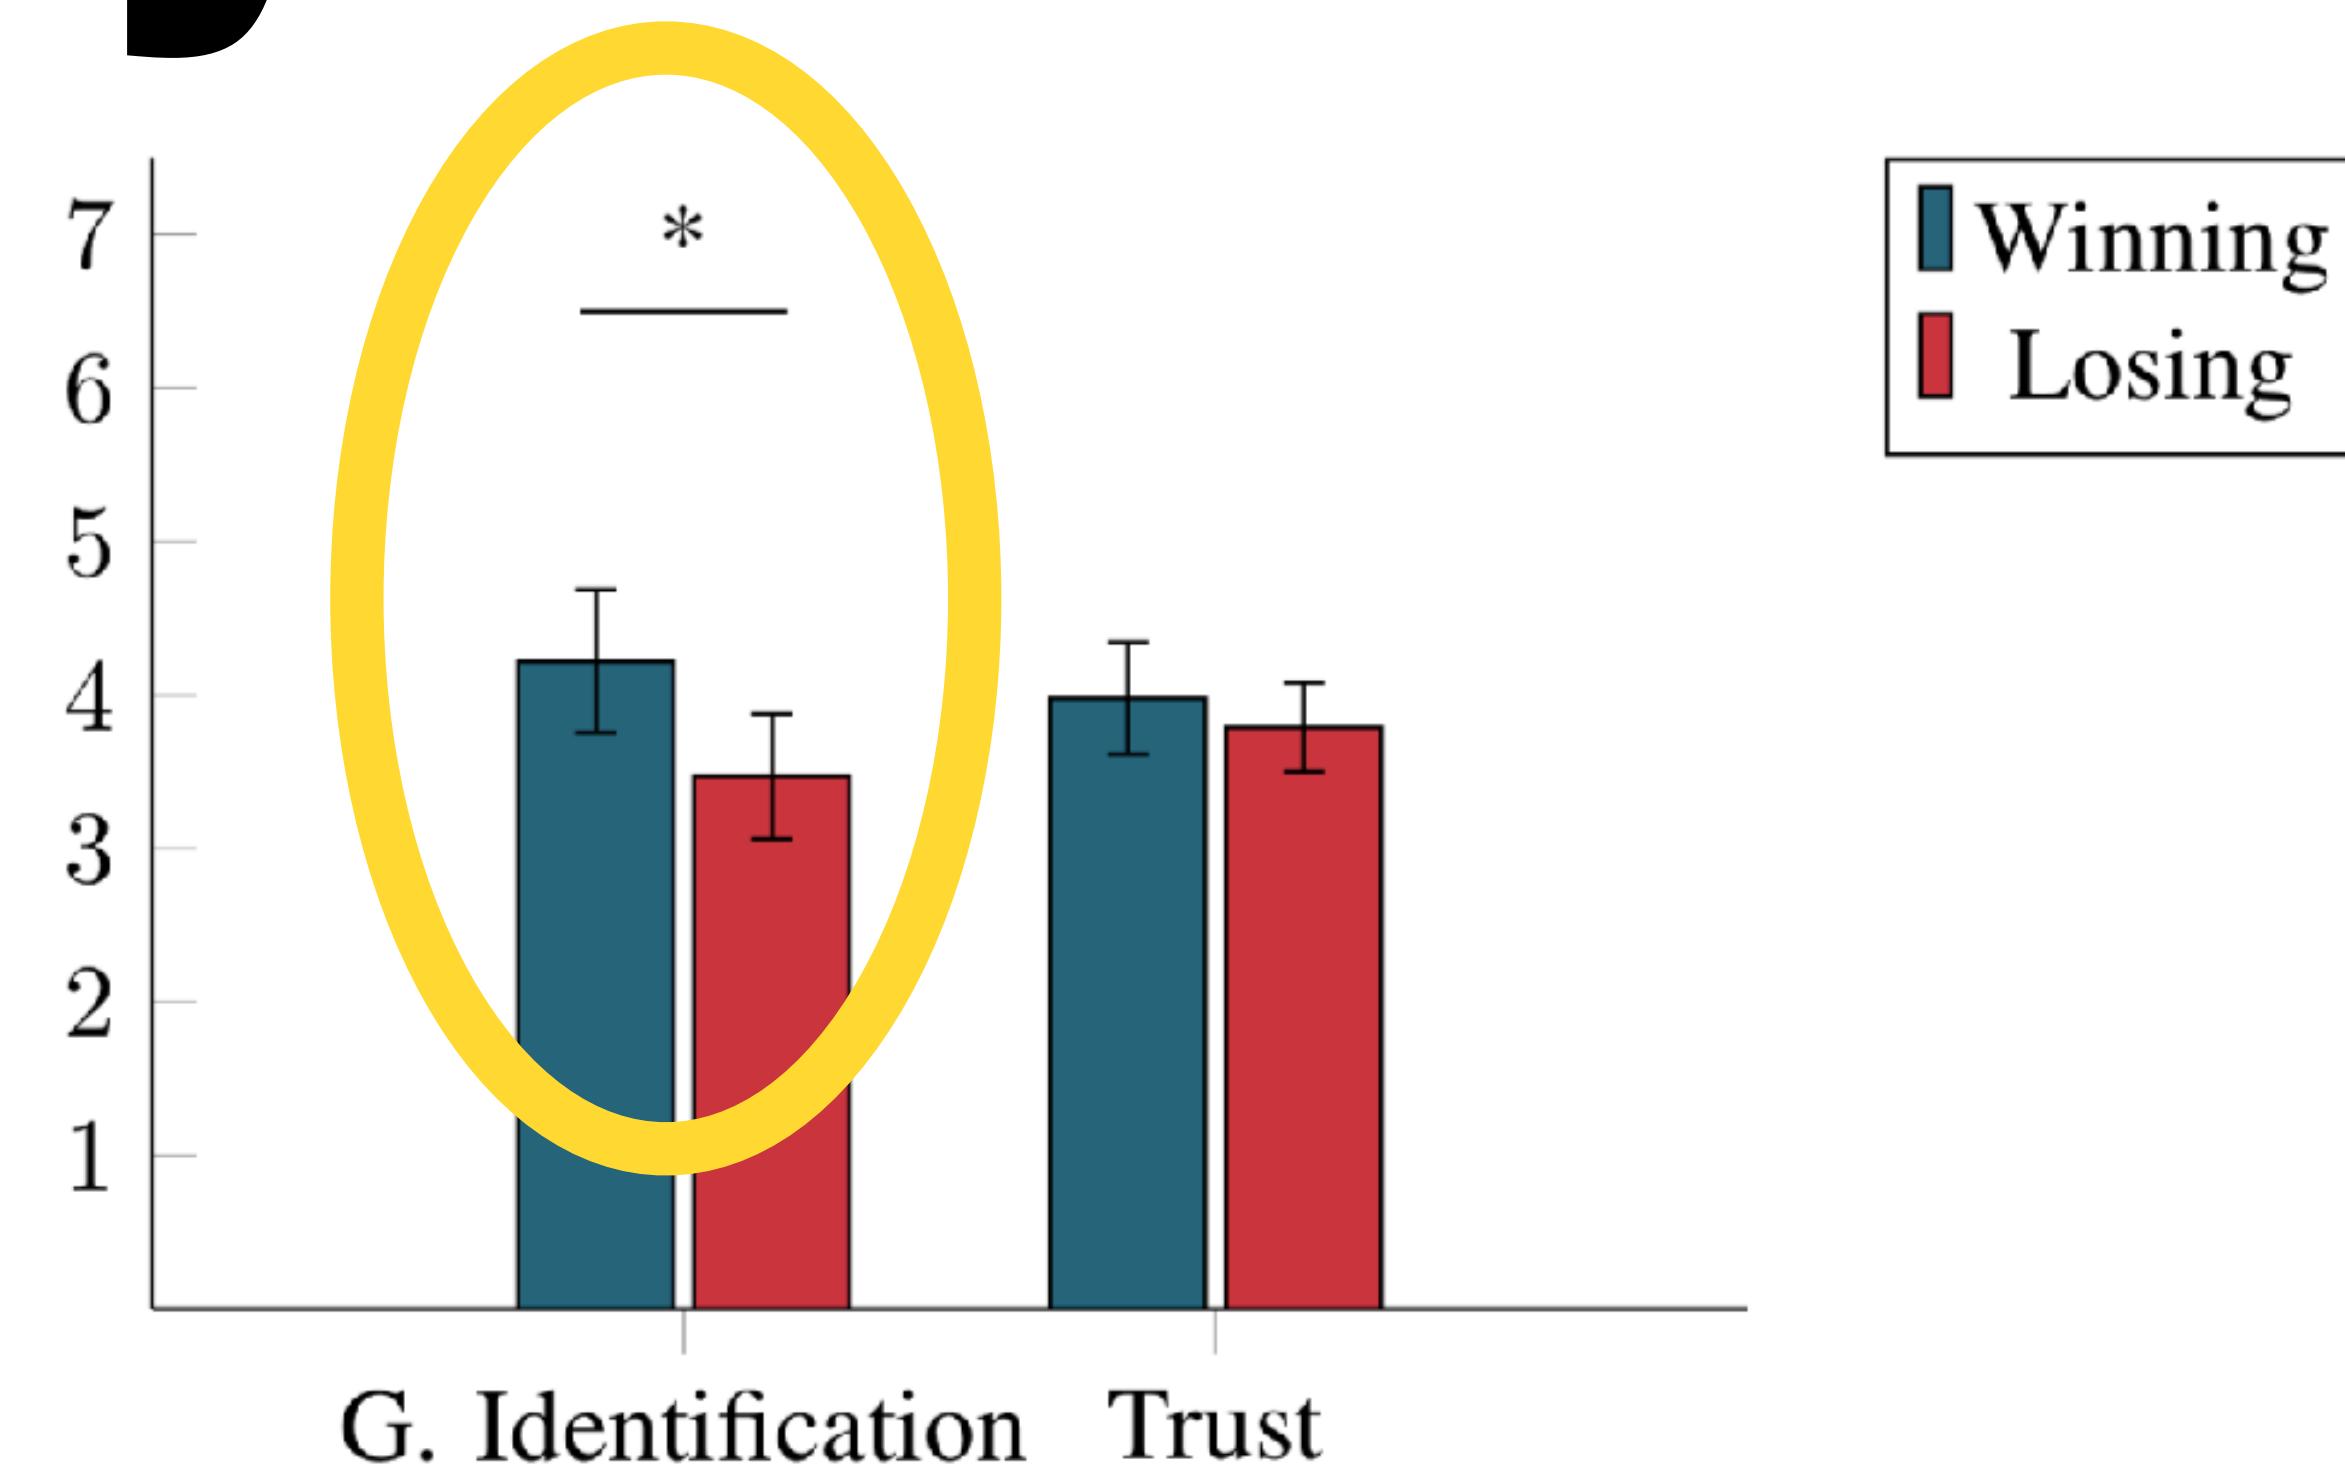

AAMAS'19 - Demos Track

**Does the opinion
about a robotic
teammate change if
our team wins or
loses the game?**

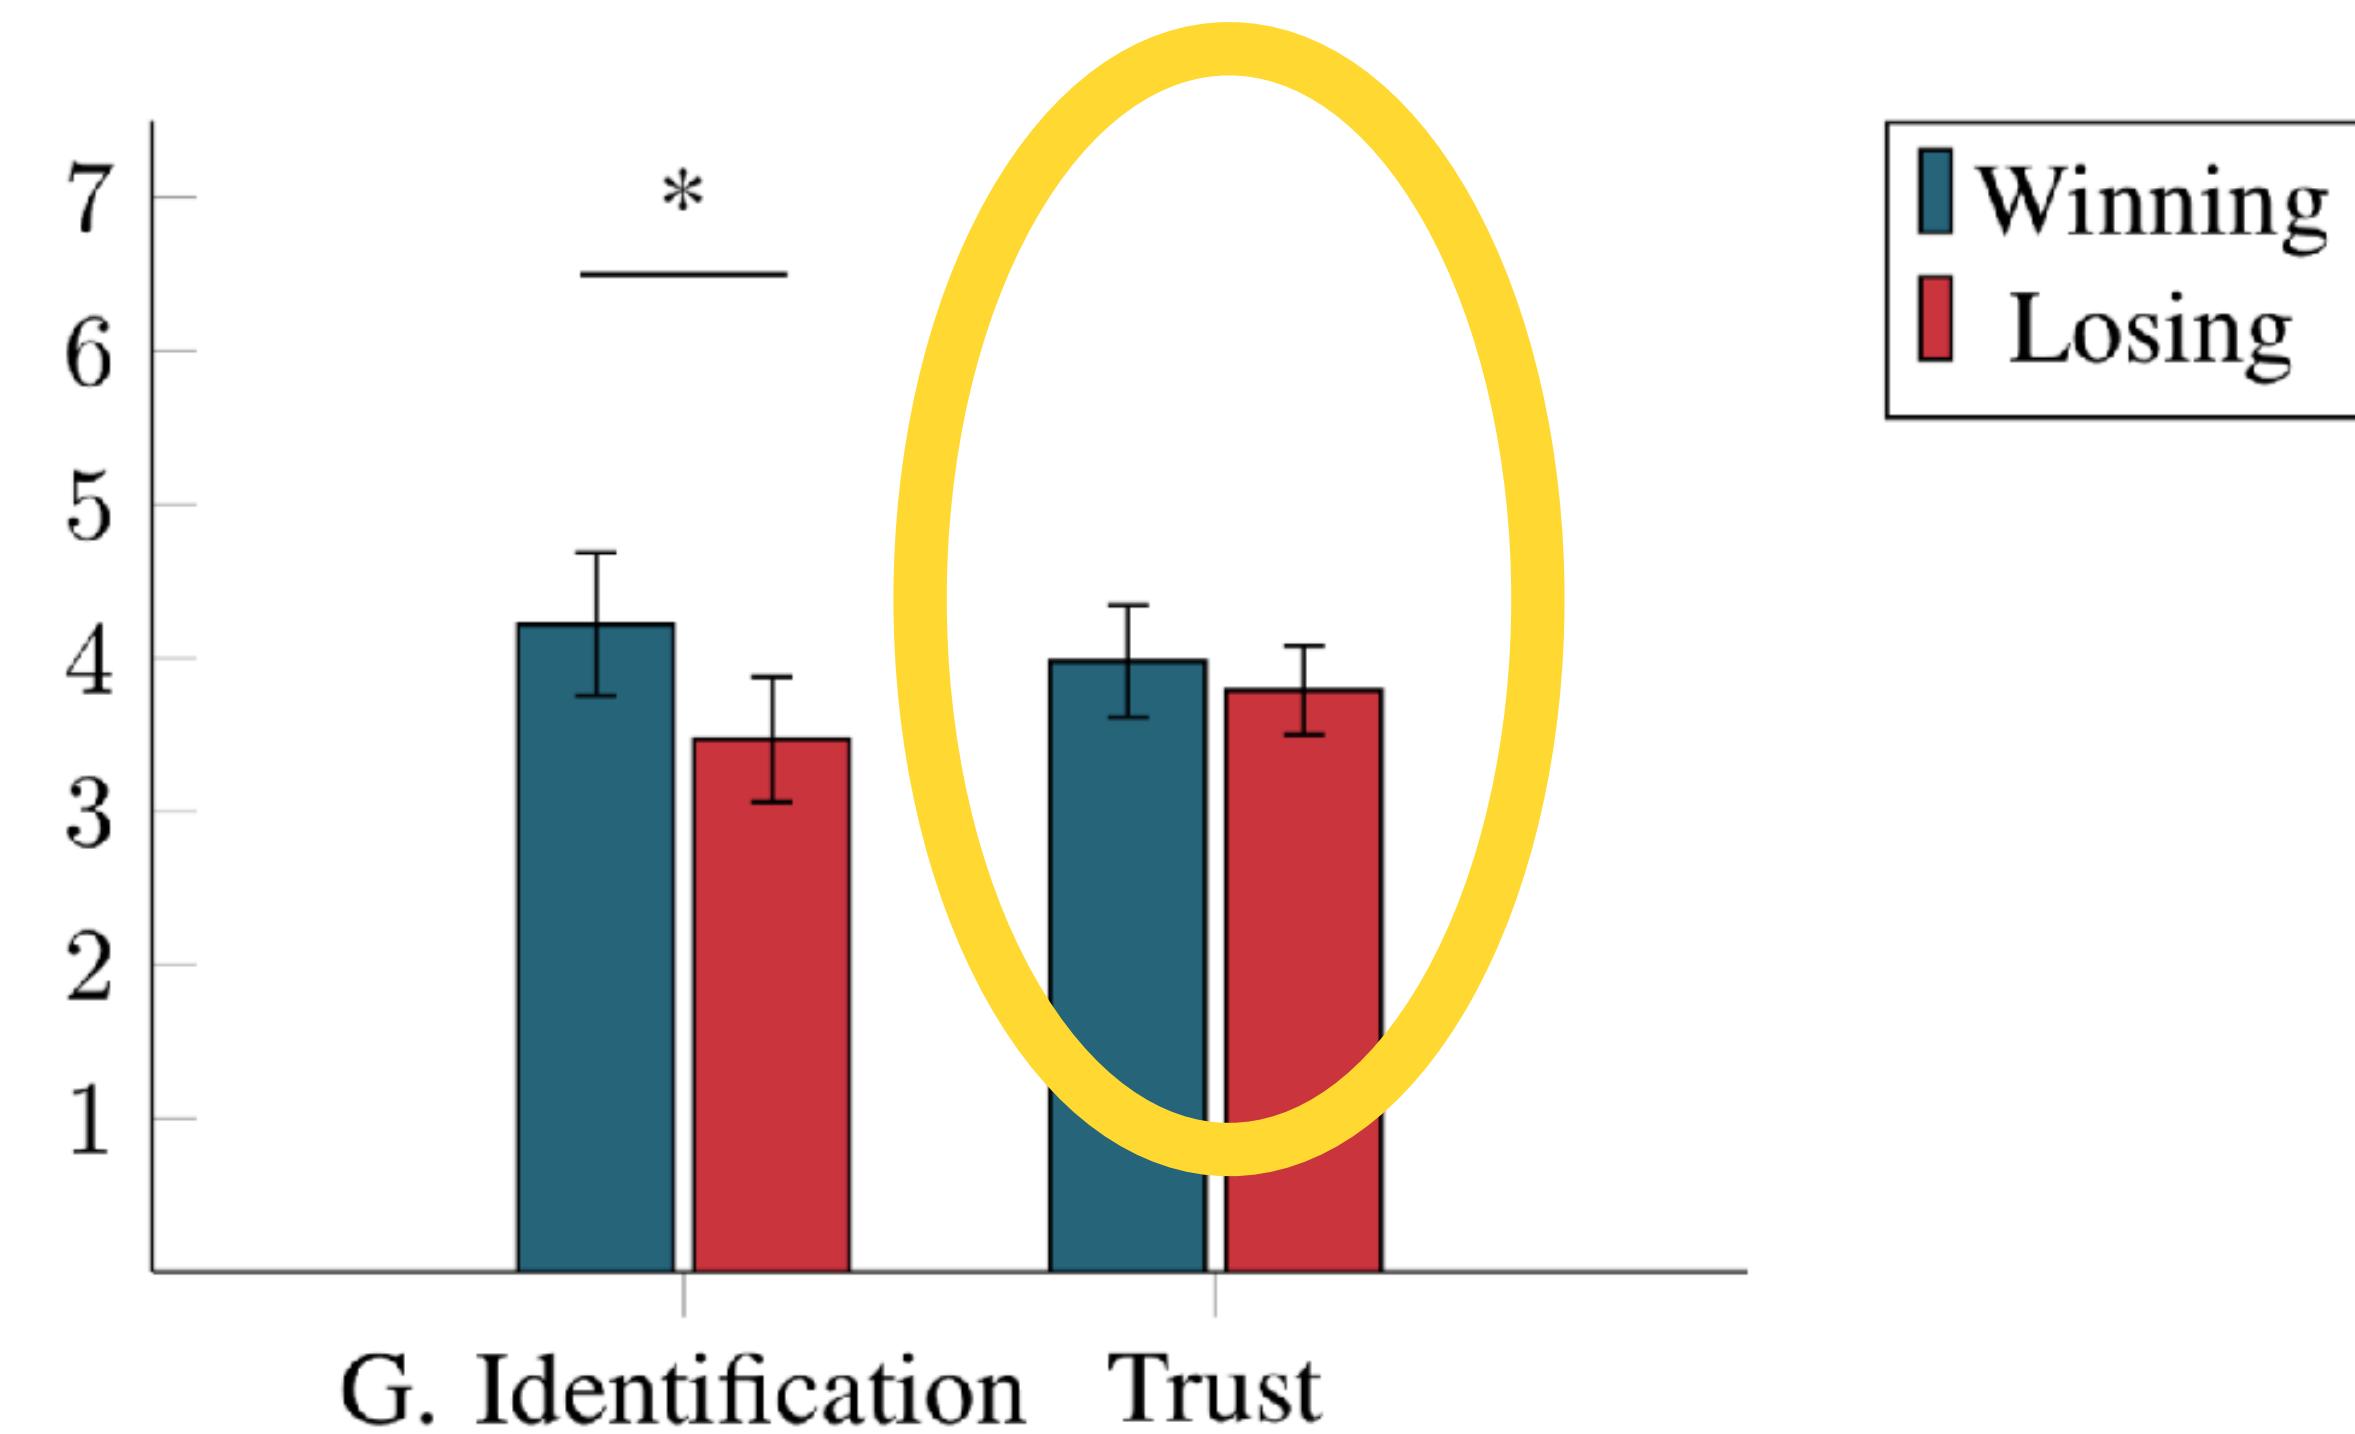

Experimental Study

- 70 people
 - 35 won the game
 - 35 lost the game
- In the end, people answered to a questionnaire about the robots and about the game

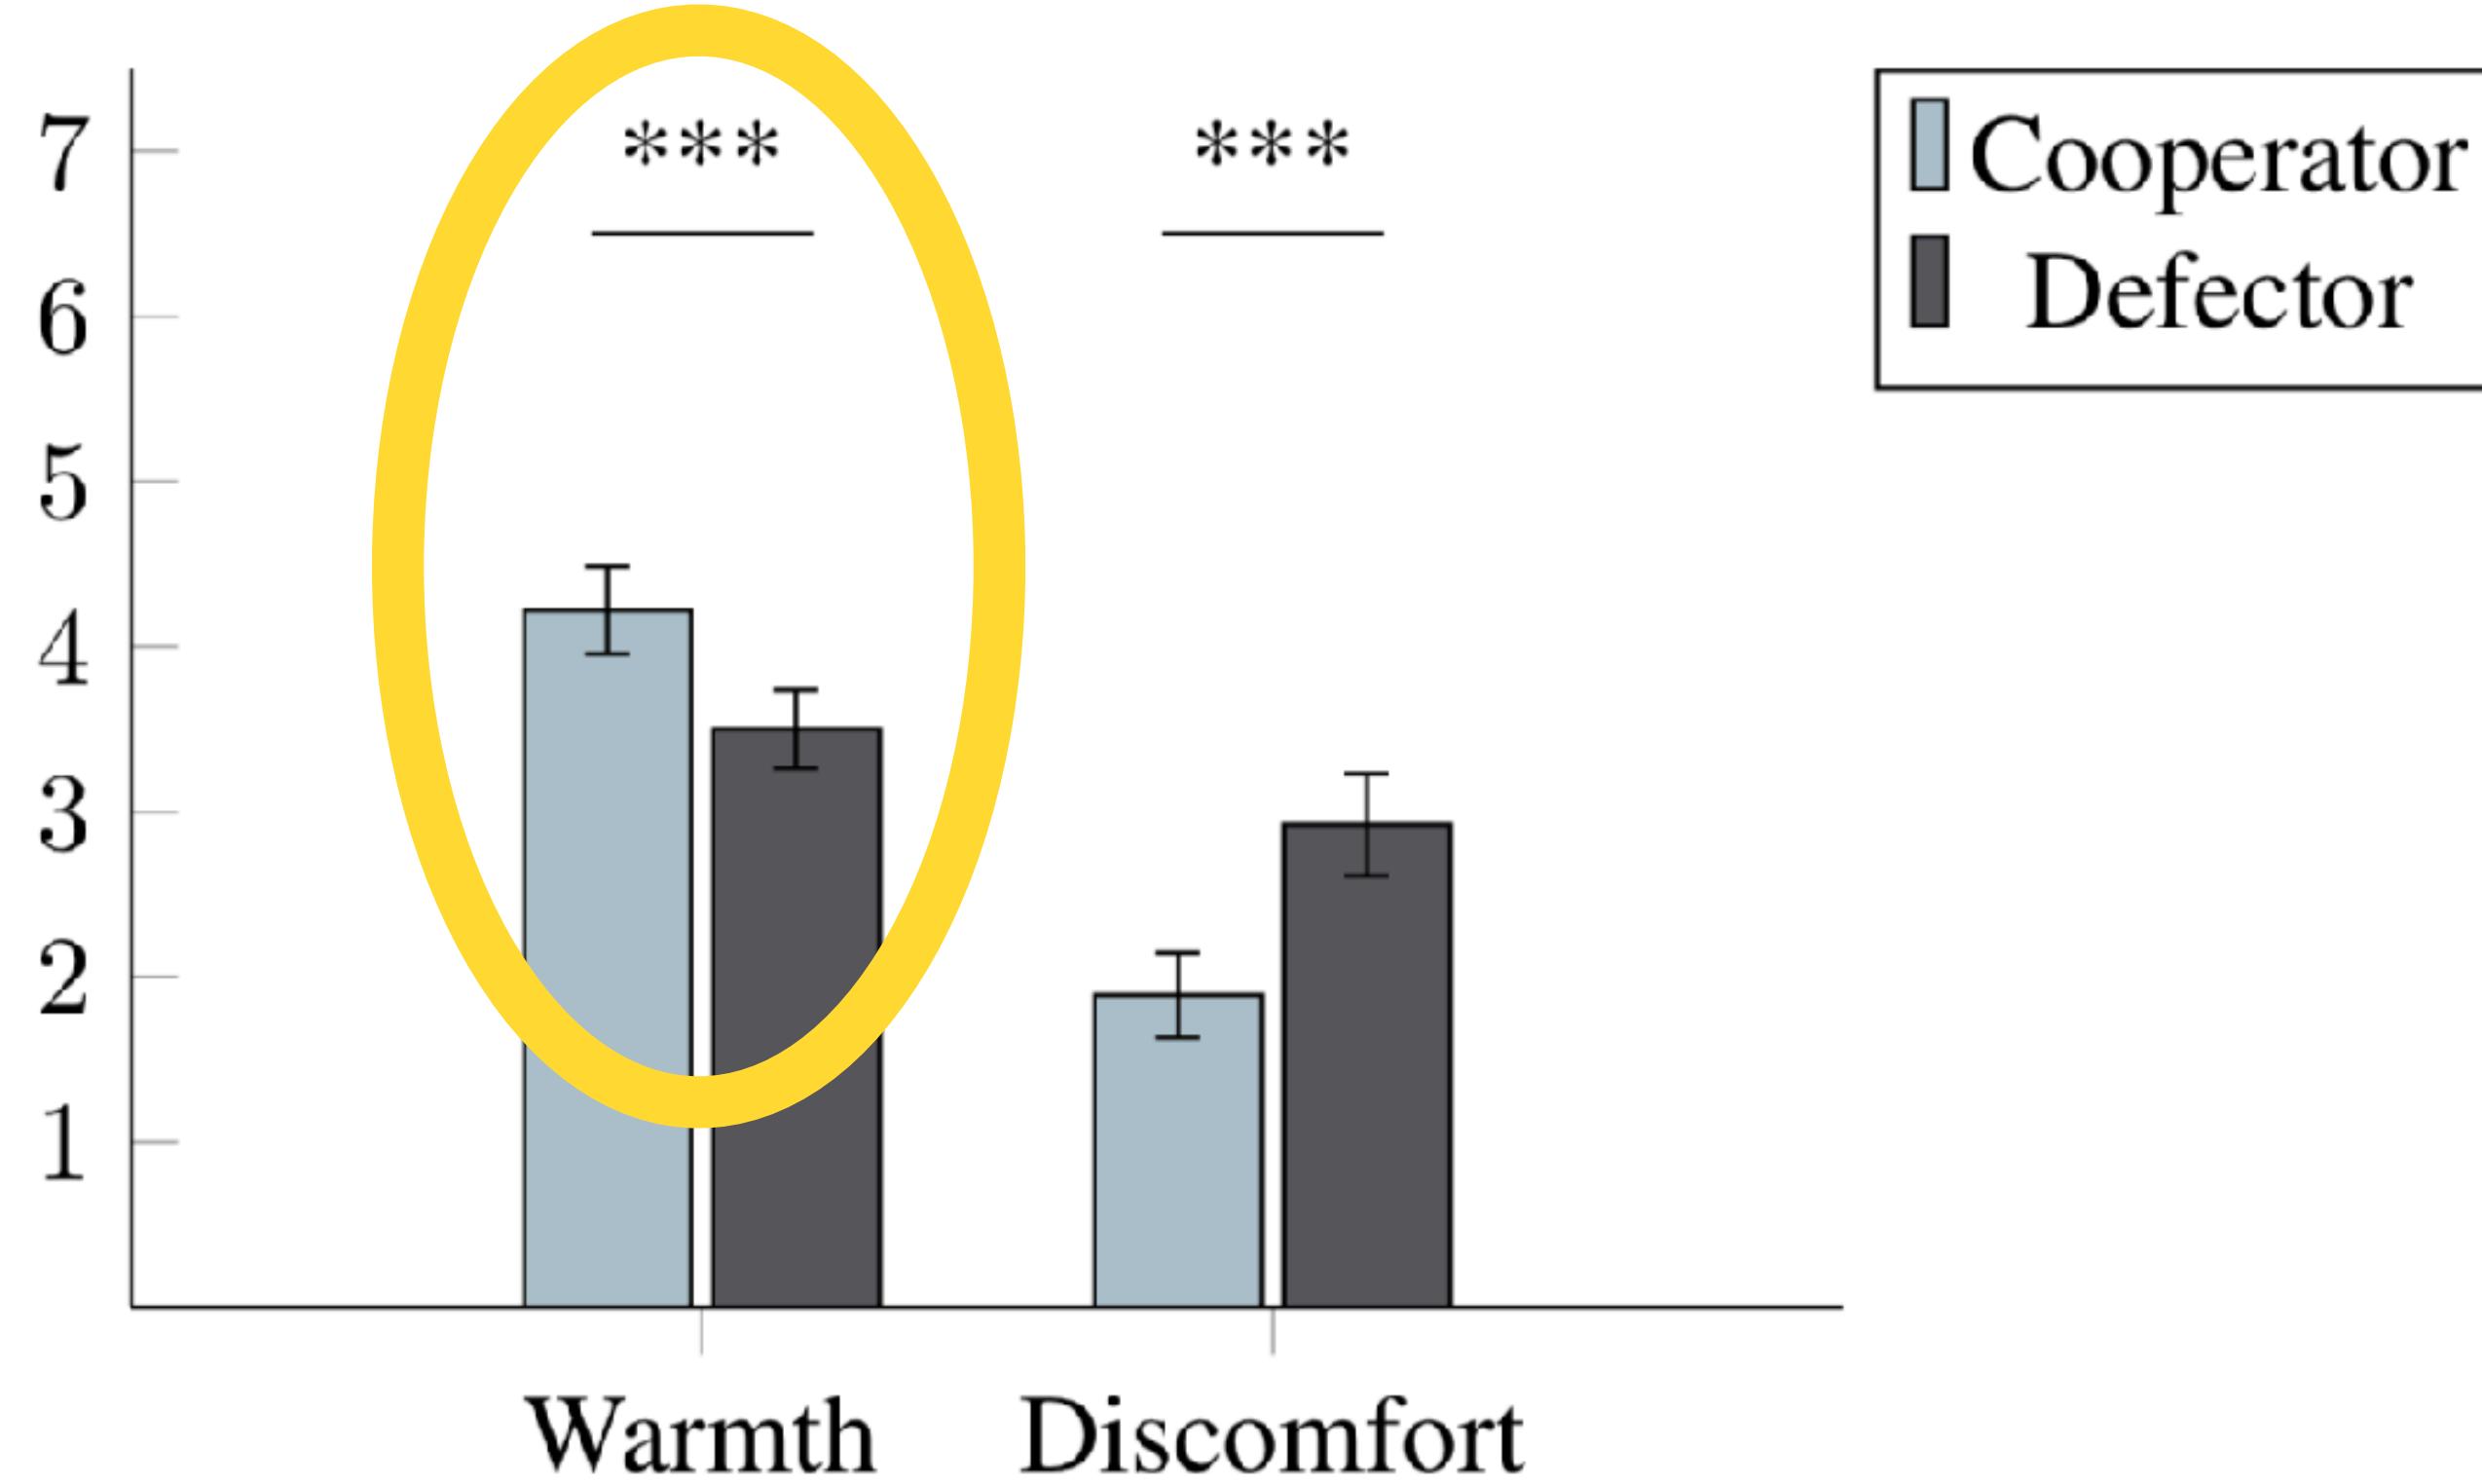

Do you identify with your team?

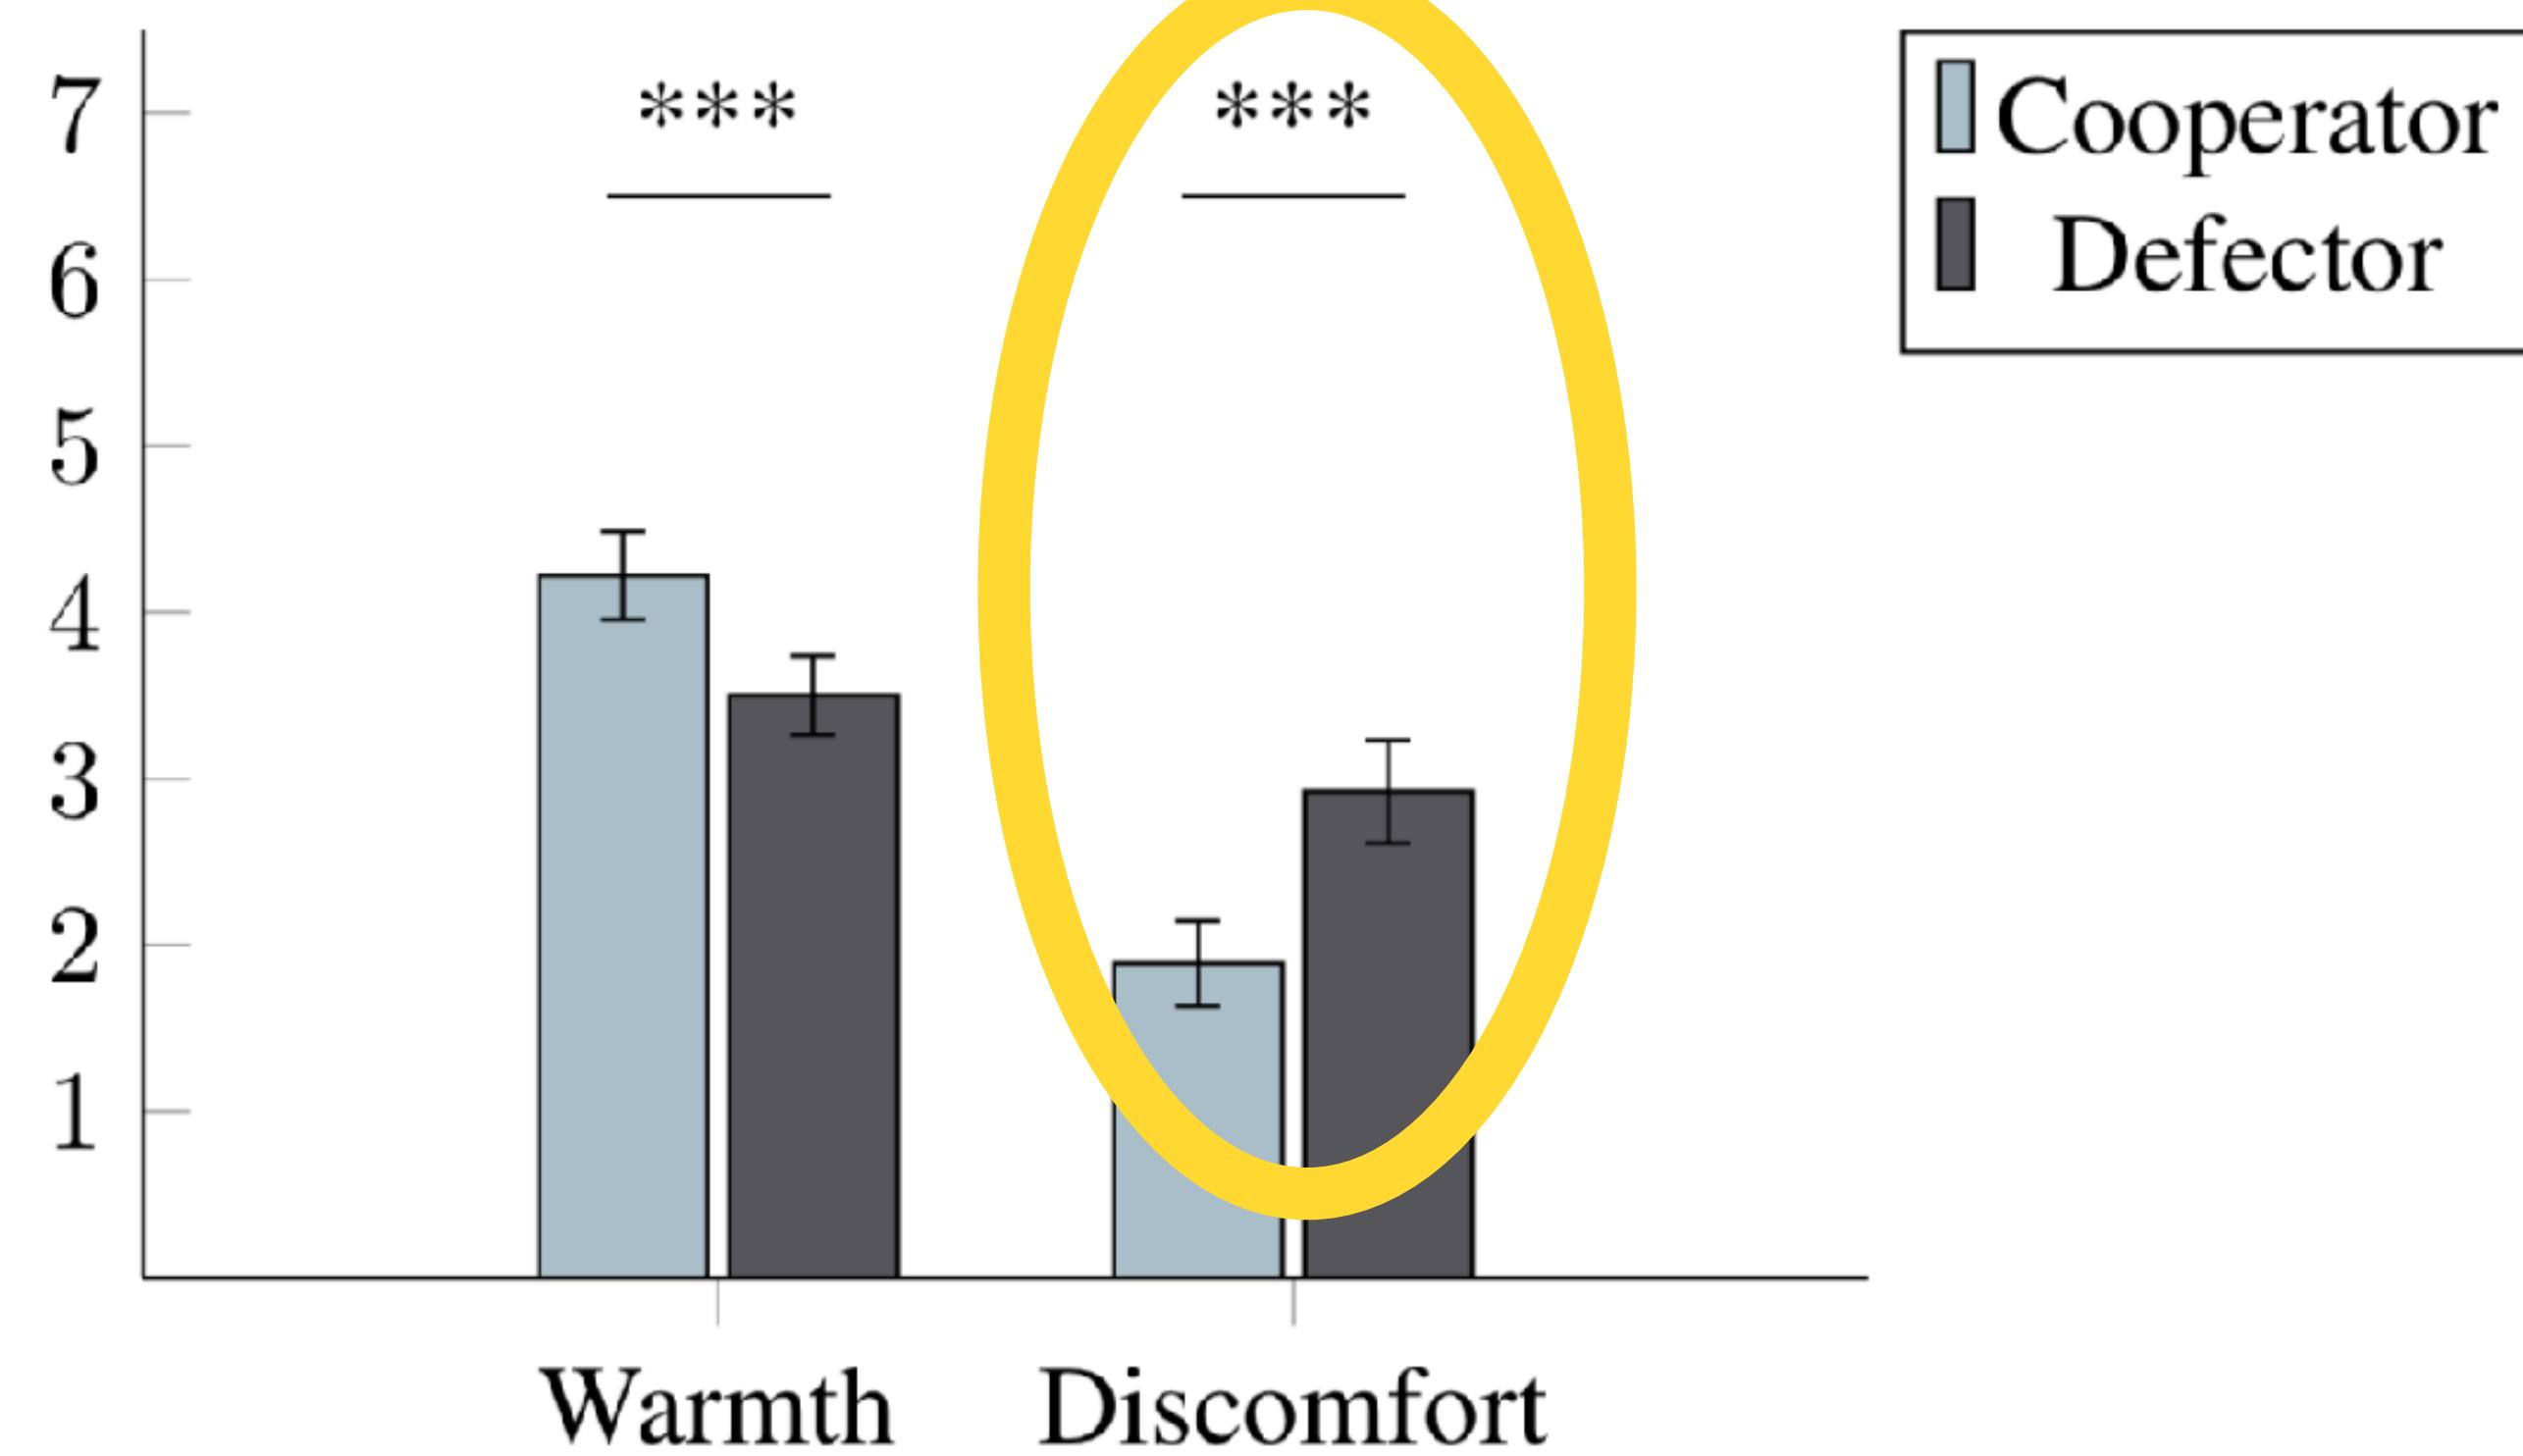

Do you trust your team?

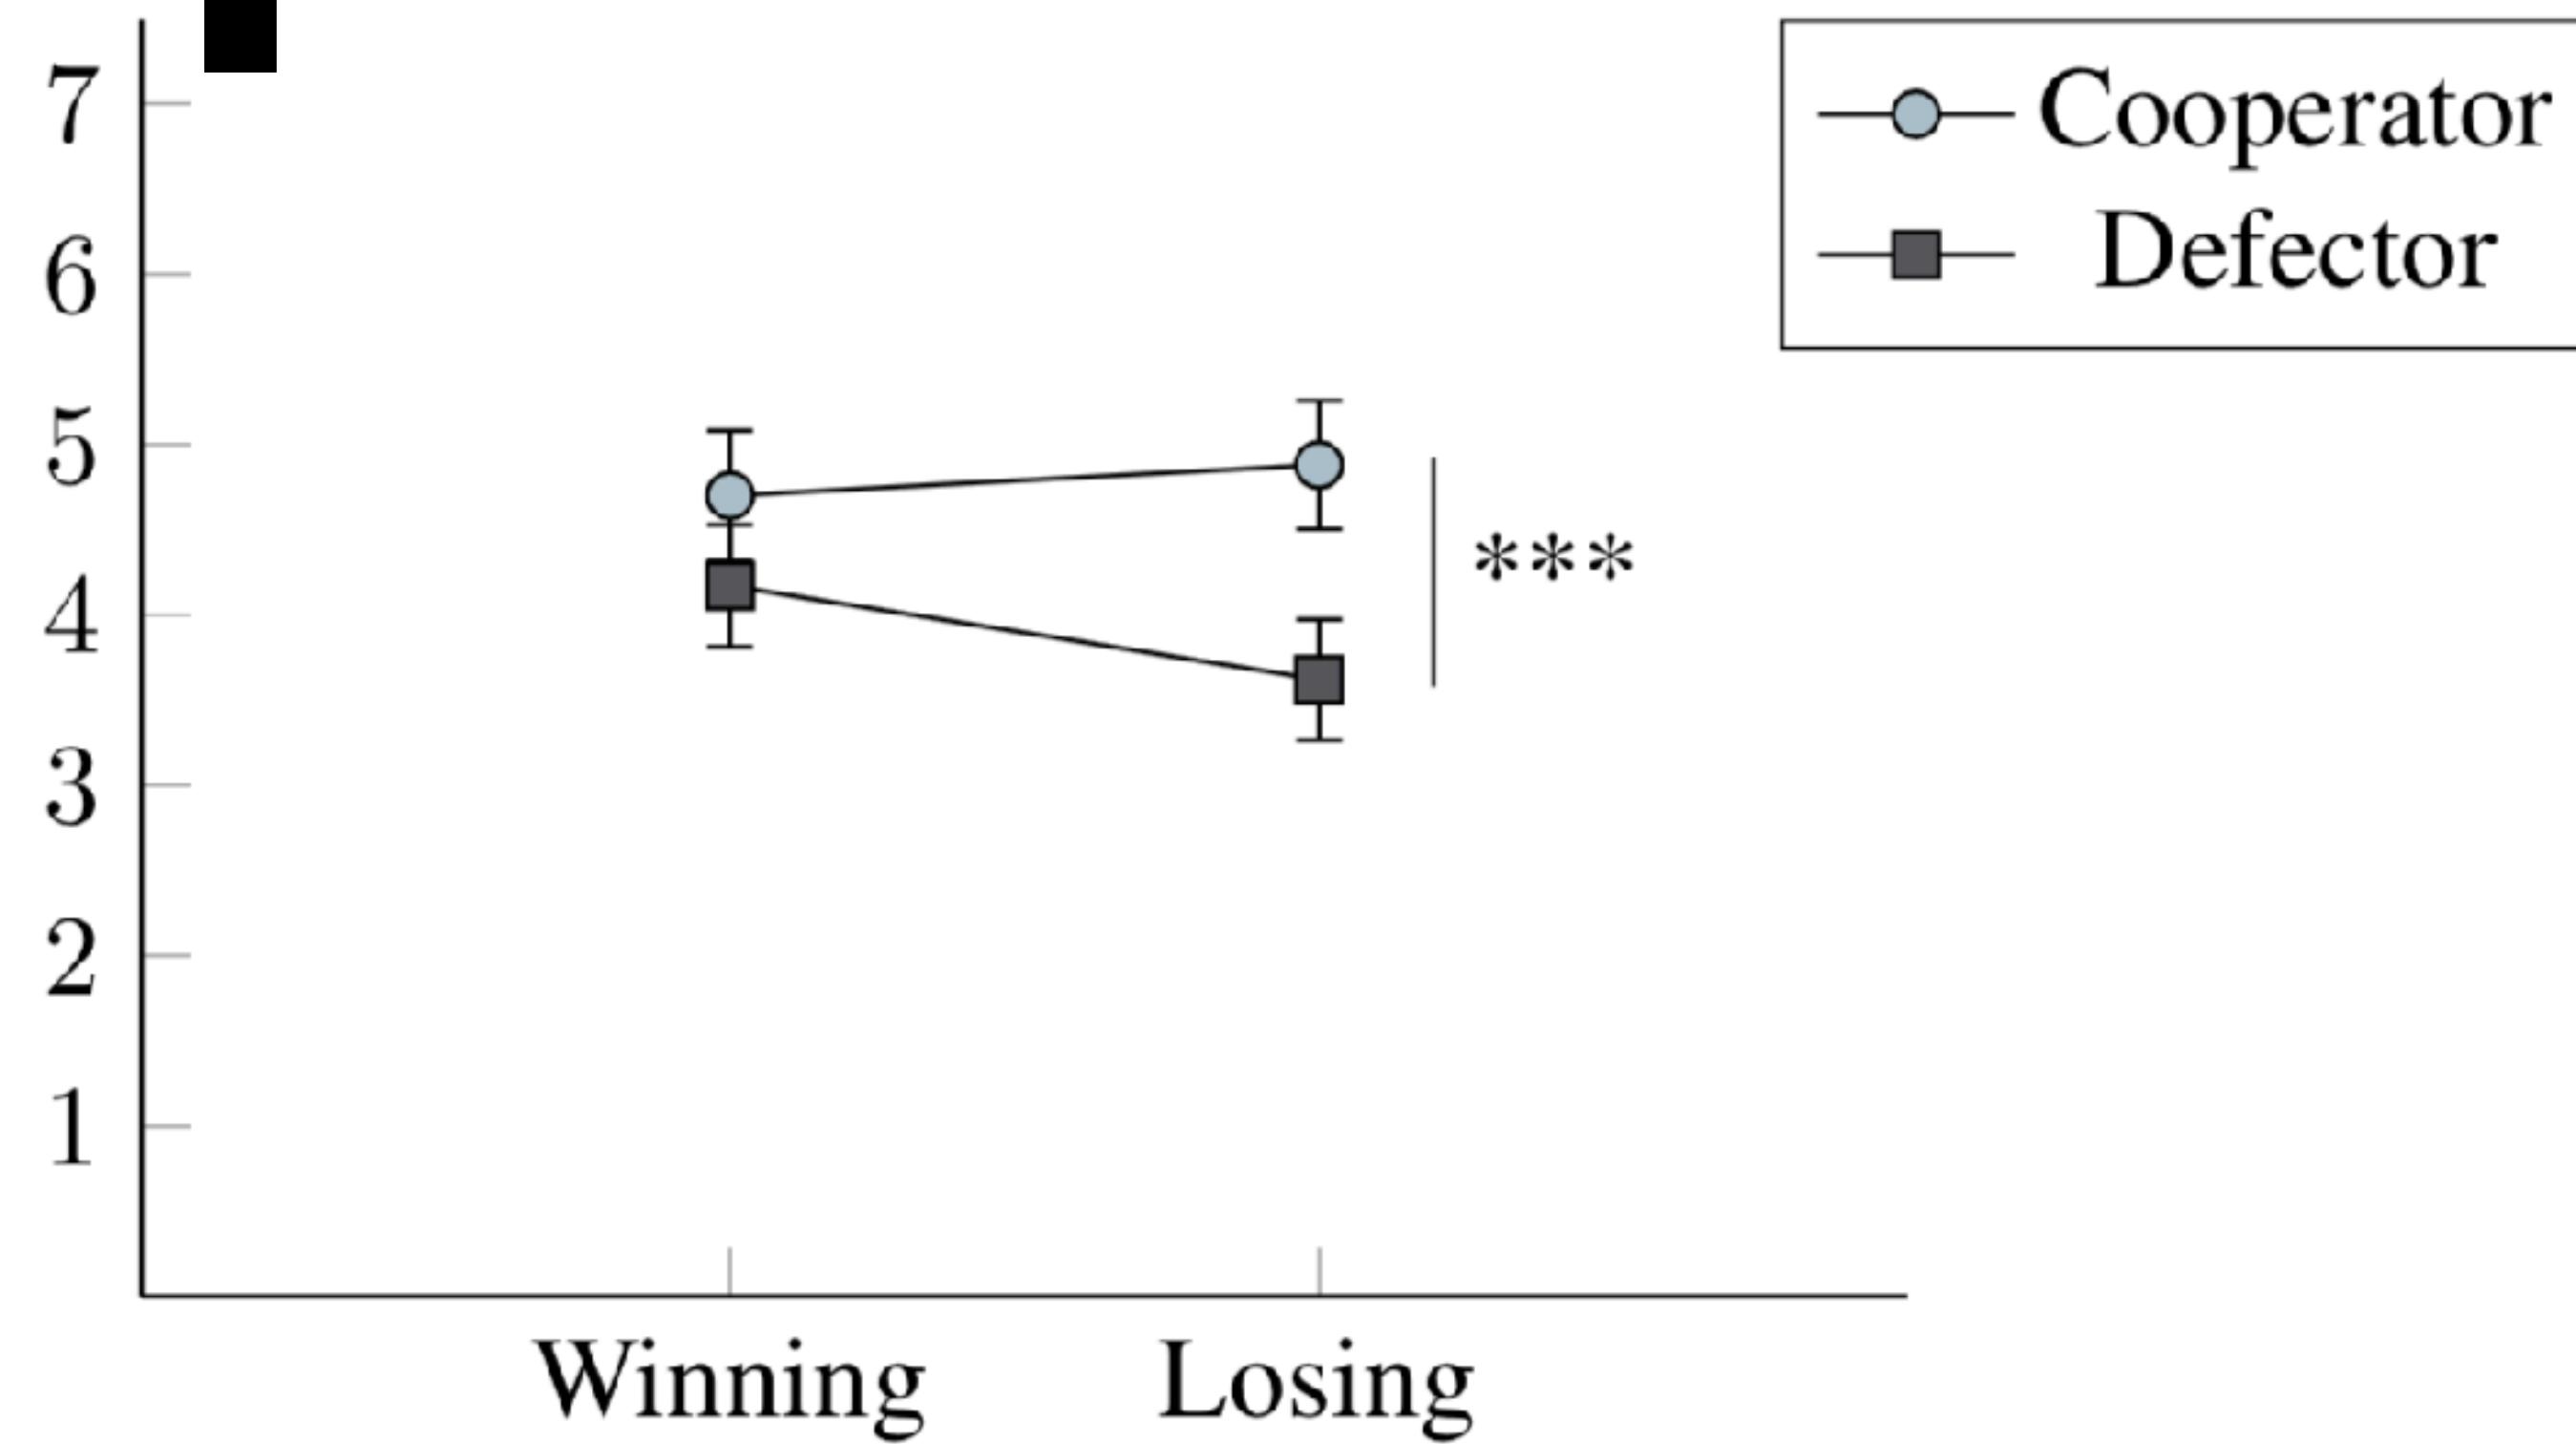

Are these robots nice?

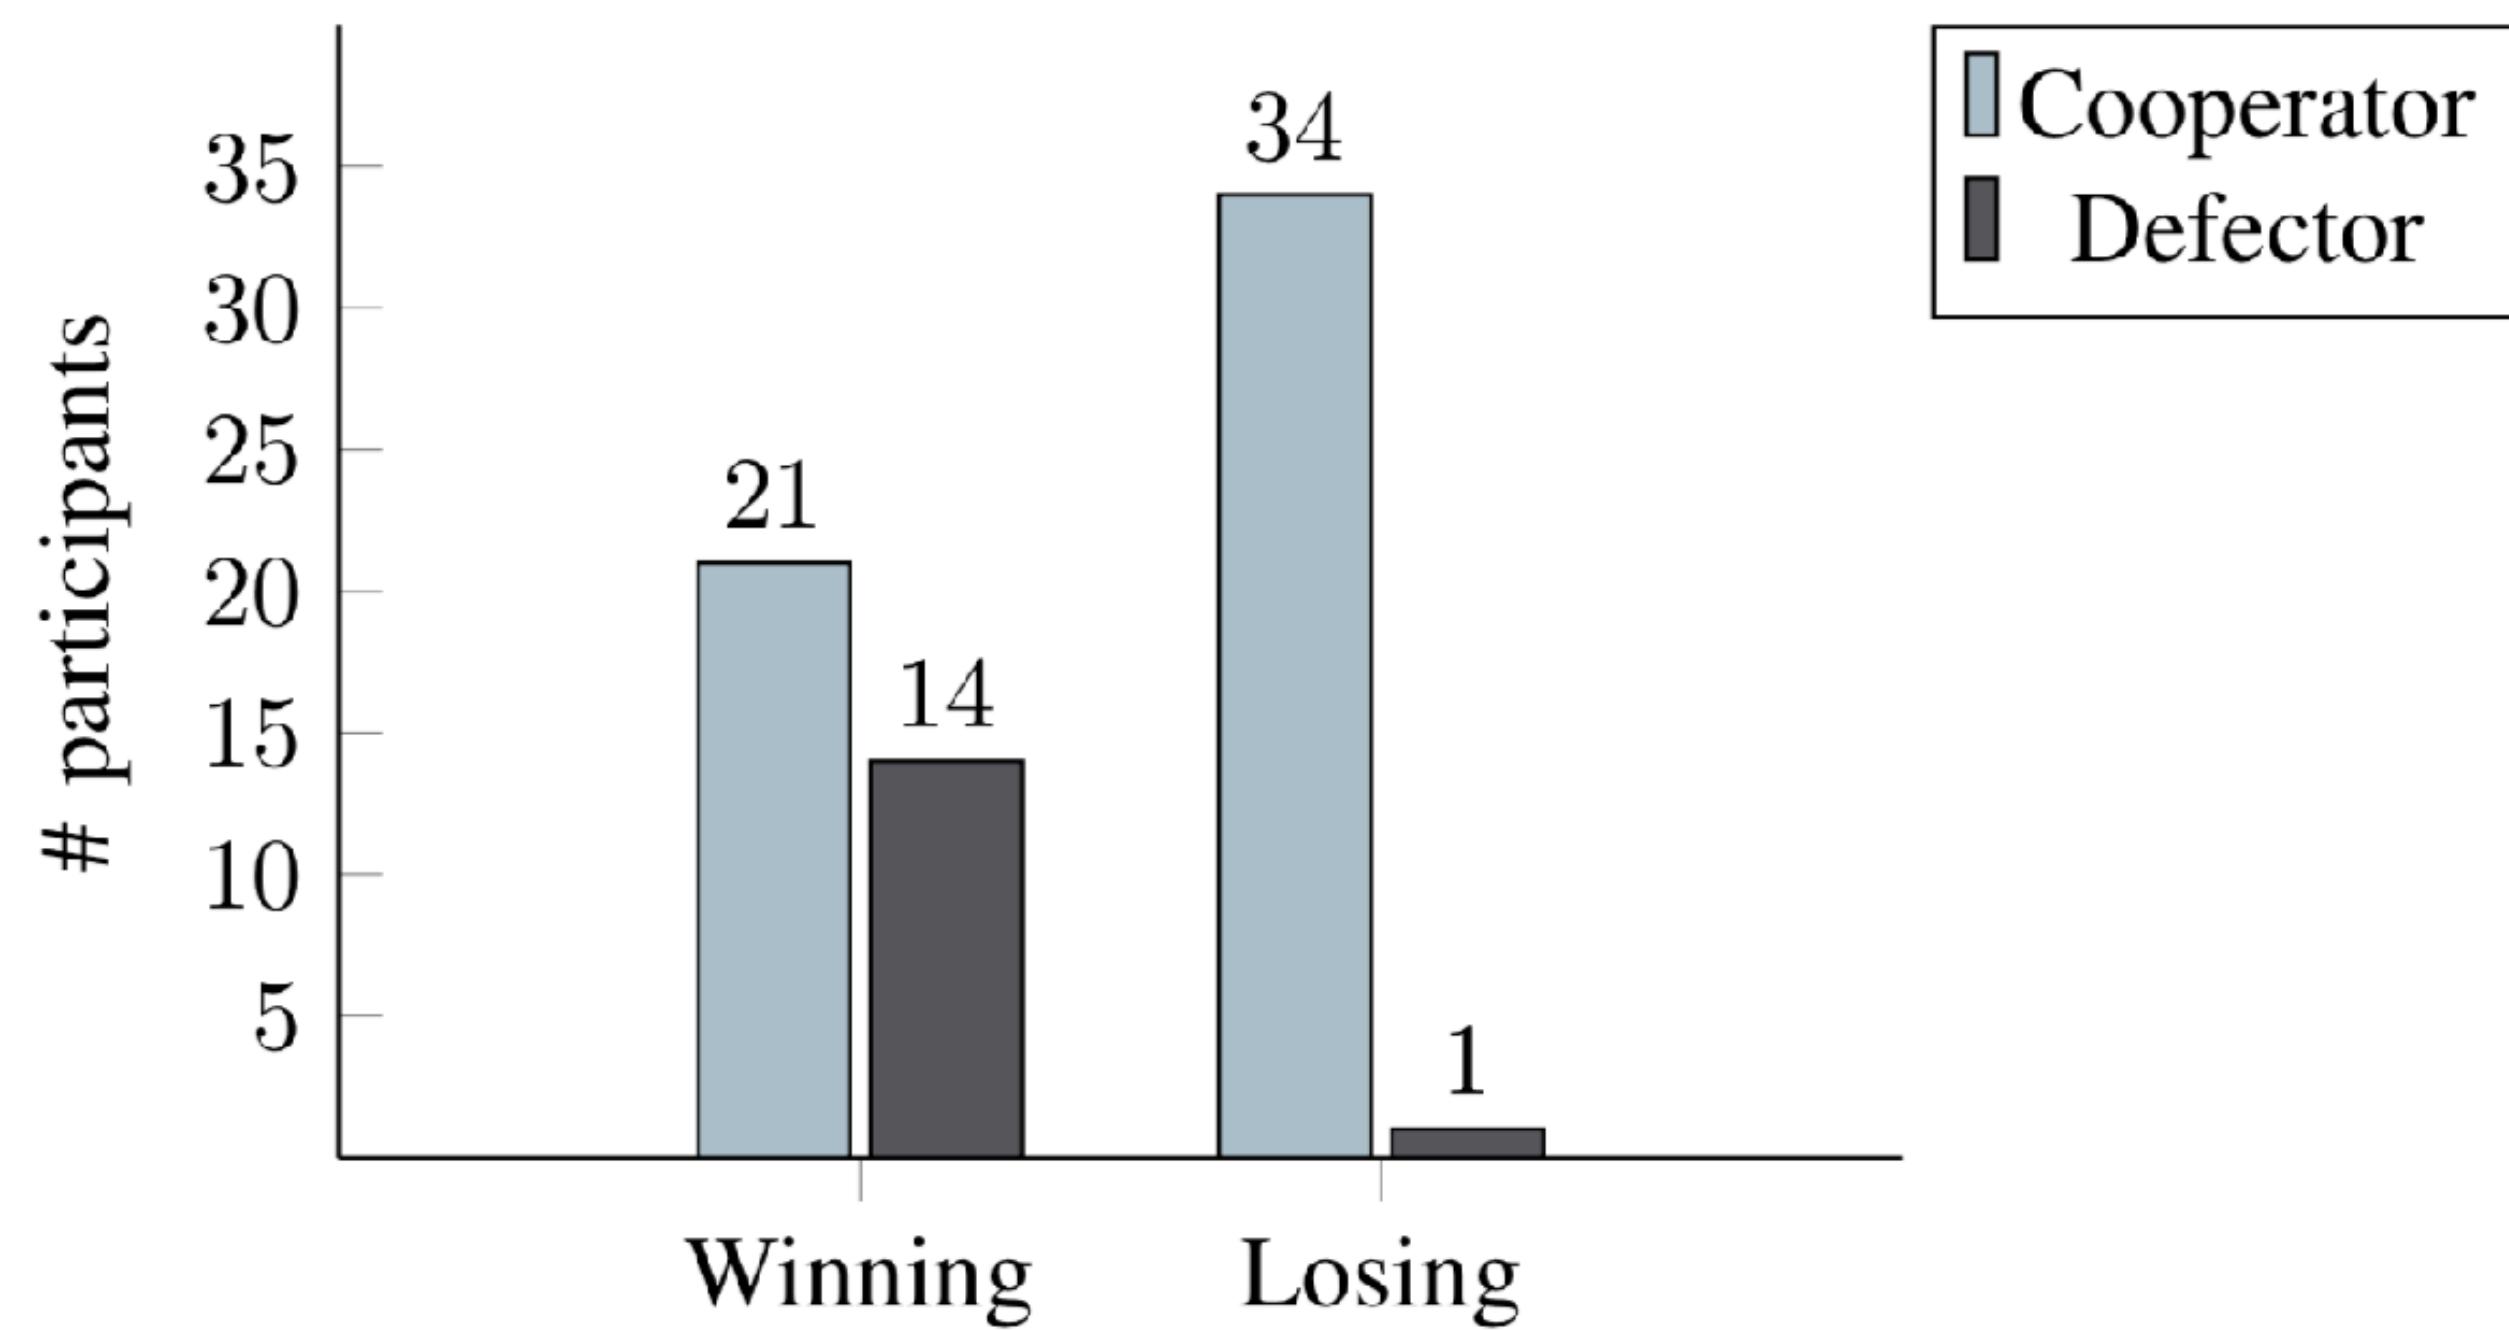

Are these robots unpleasant?

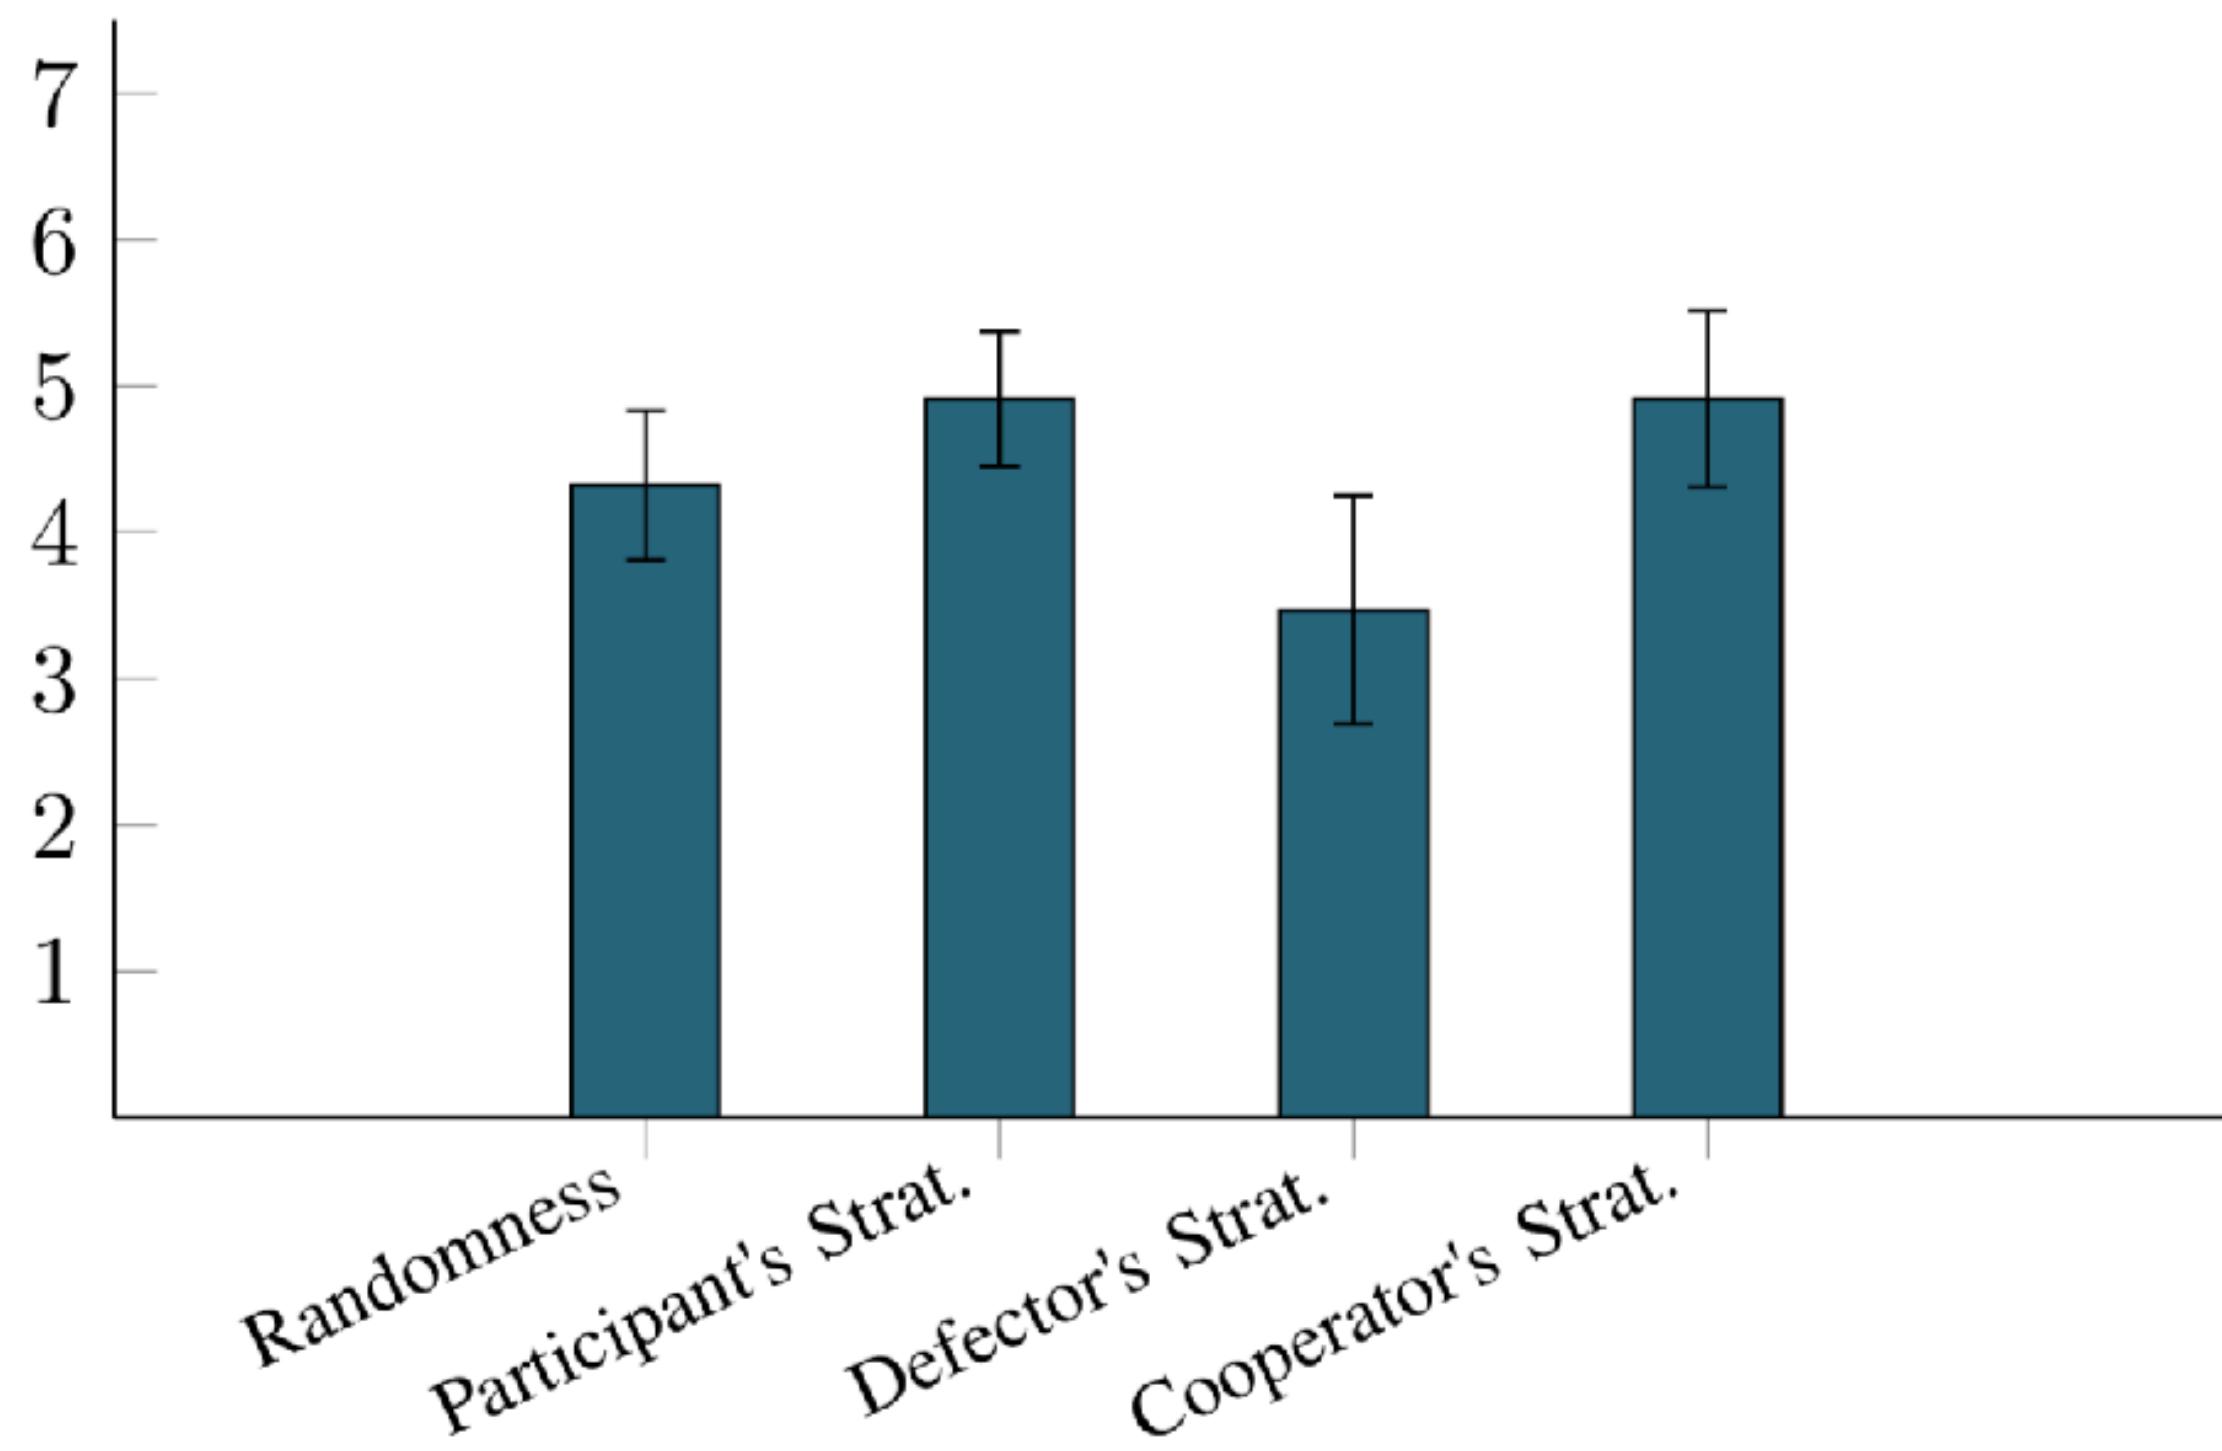

Are these robots competent?

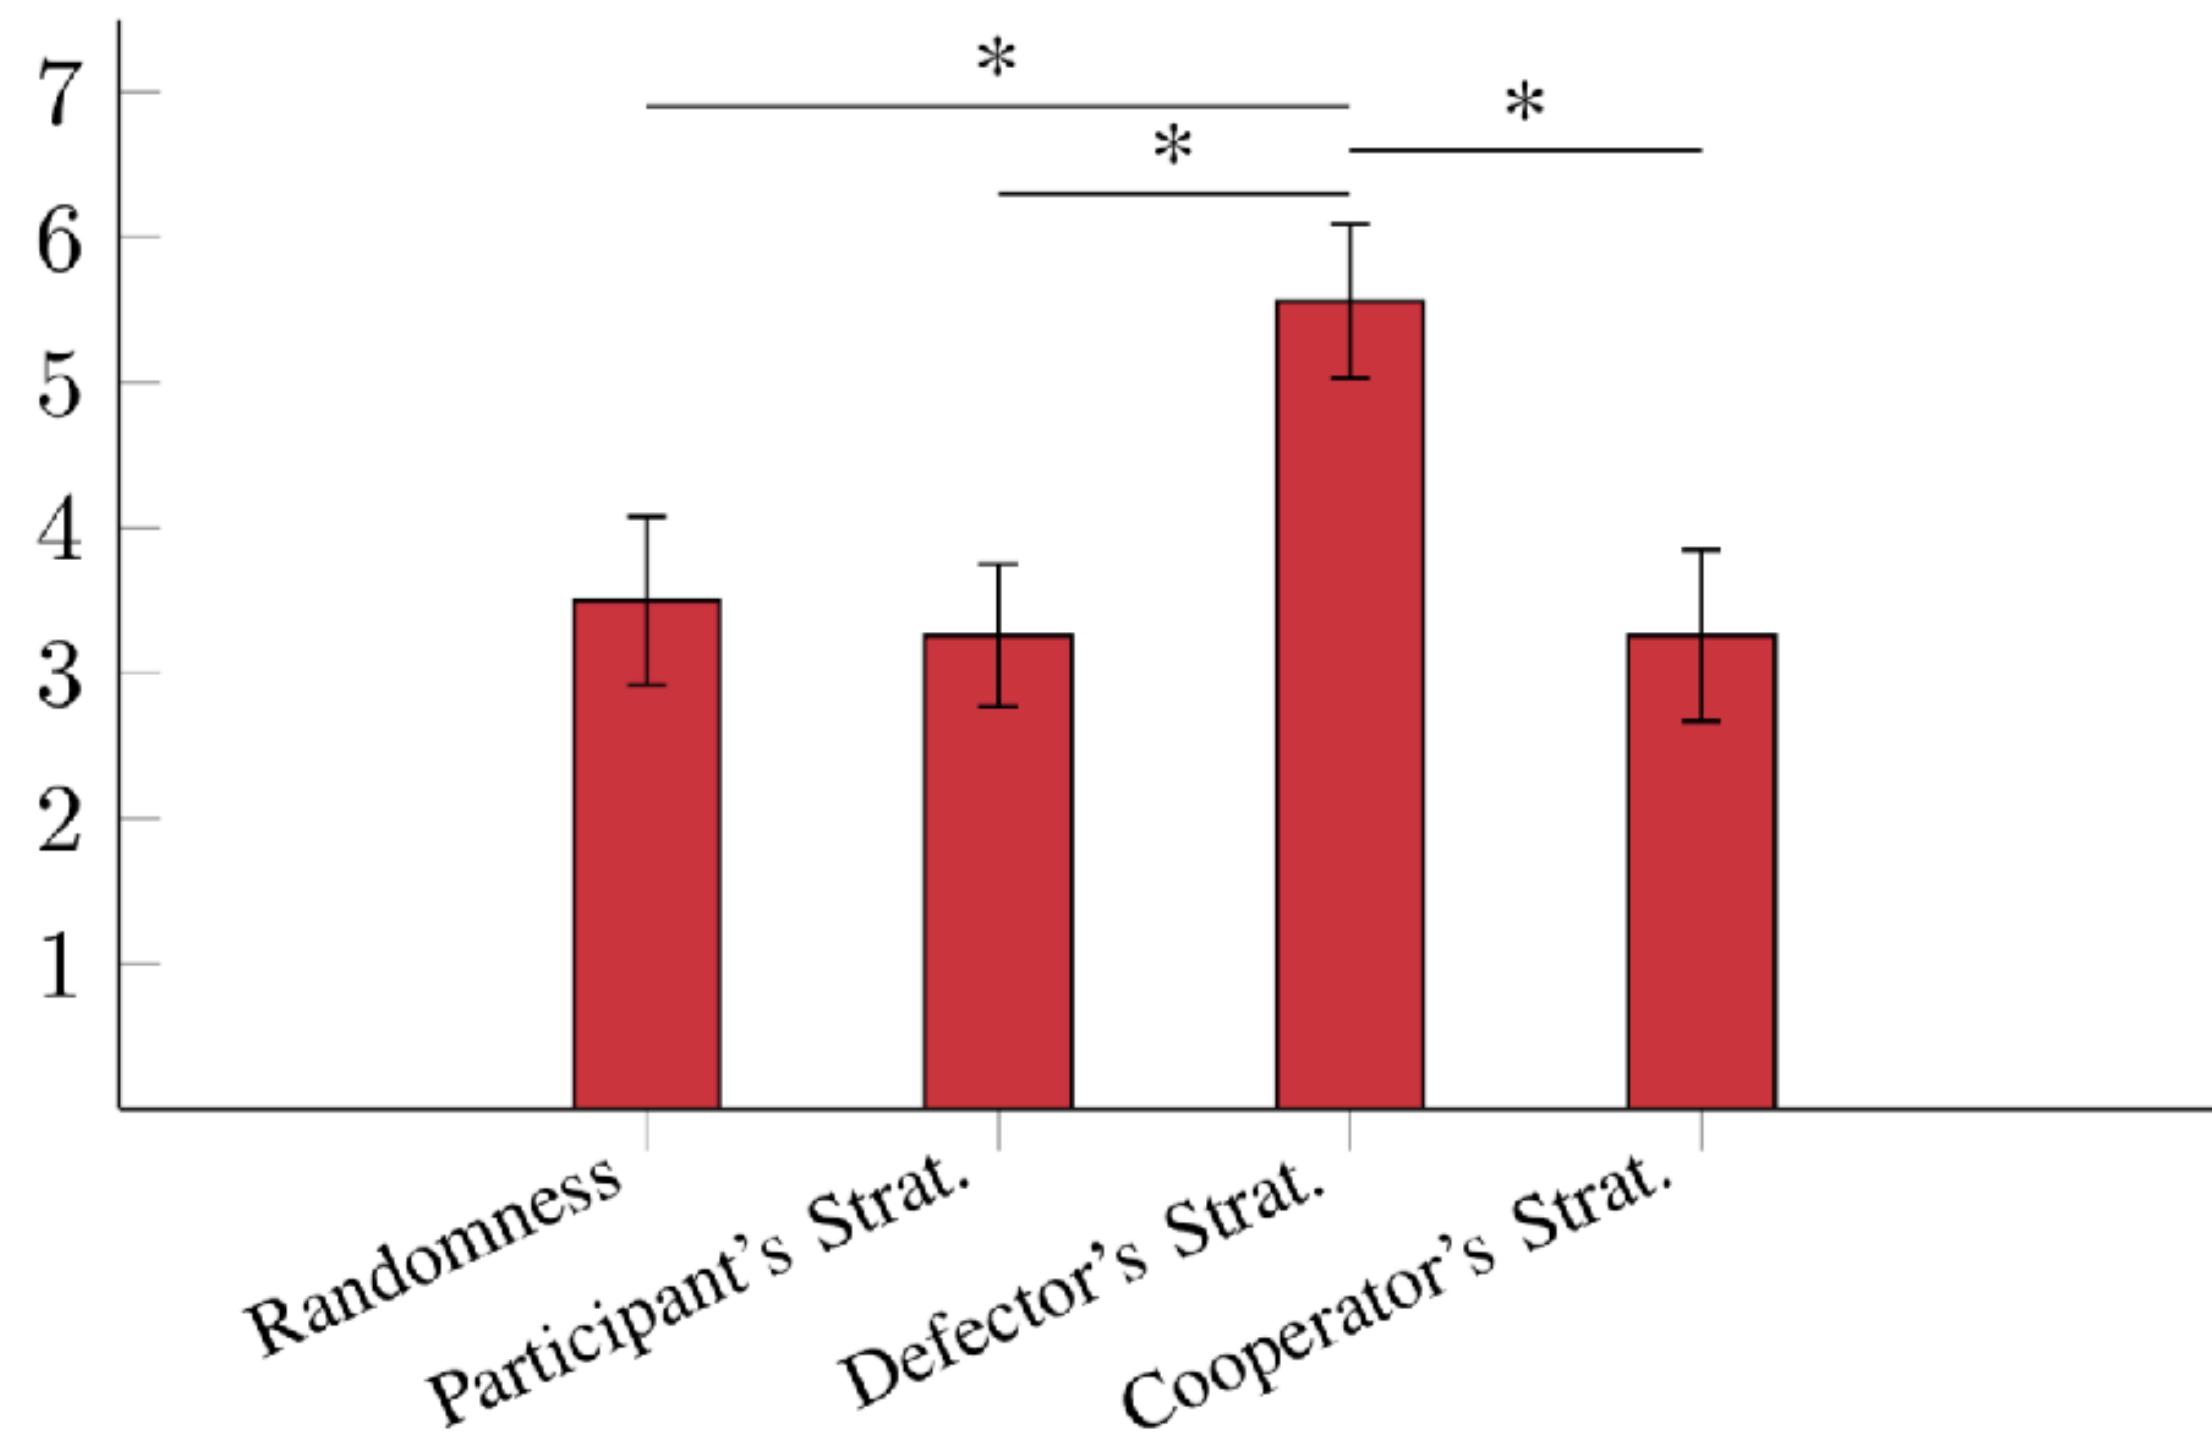

Which robot do you prefer?

Winning condition: whose credit is it?

Losing condition: whose blame is it?

**Participants that won the game
reported a significantly higher
agreement with the sentence**

...

**compared to participants that
lost the game.**

Participants that won the game reported a significantly higher agreement with the sentence “Social robots will be relevant to the society”, compared to participants that lost the game.

**Does the opinion
about a robotic
teammate change if
our team wins or
loses the game?**

Does the opinion
about a robotic
team may change if
our team wins or
loses the game?

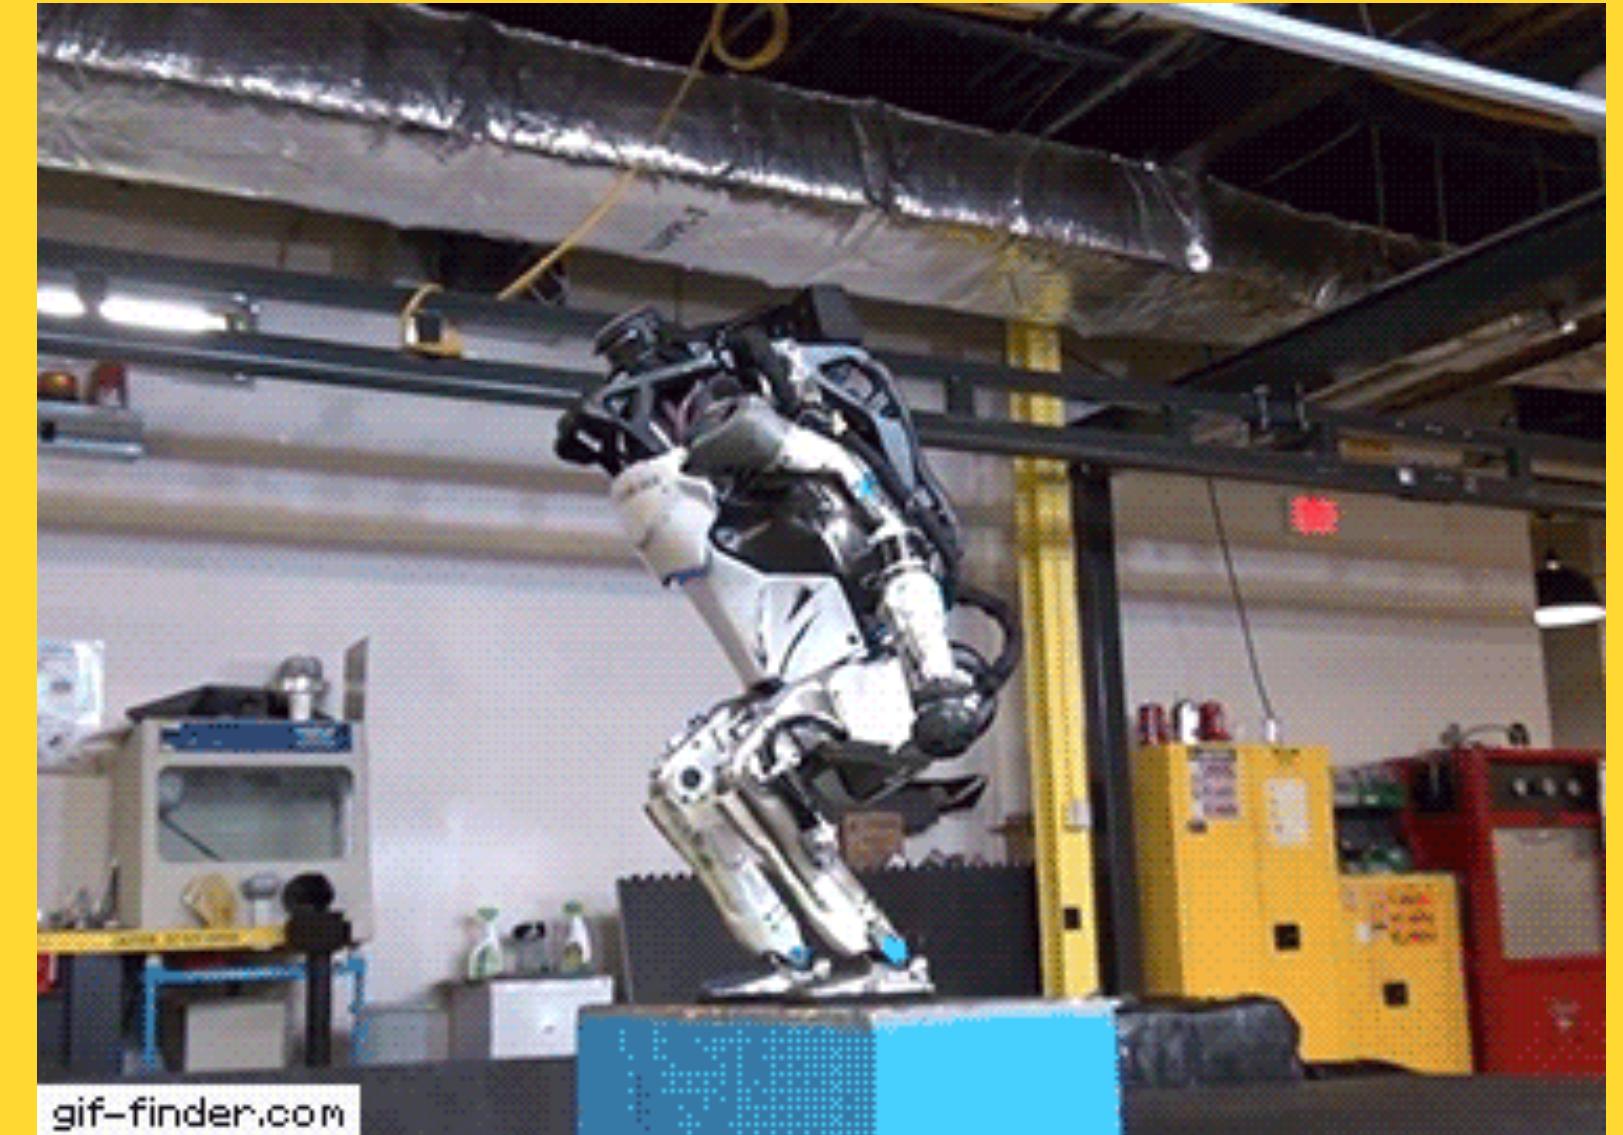

**Beyond the main
research question:**

**Beyond the main
research question:
Winning masked
the selfish robot!!!**
